Space was at the center of America's imagination in the 1960s. President John F. Kennedy's visionary statement captured the mood of the day: "We choose to go to the moon in this decade and do the other things, not because they are easy, but because they are hard." The Apollo mission's success in July 1969 made almost anything seem possible, but the Cold War made space flight the province of governmental agencies in the United States. When the Apollo program ended in 1972, space lost its hold on the public interest, as the great achievements wound down. Entrepreneurs are beginning to pick up the*

slackâlooking for safer, more reliable, and more cost effective ways of exploring space. Entrepreneurial activity may make create a renaissance in human spaceflight. The private sector can energize the quest for space exploration and shape the race for the final frontier. Space entrepreneurs and private sector firms are making significant innovations in space travel. They have plans for future tourism in space and safer shuttles. Solomon details current US and international laws dealing with space use, settlement, and exploration, and offers policy recommendations to facilitate privatization. As private enterprise takes hold, it threatens to change the space landscape forever. Individuals are designing spacecraft, start-up companies are testing prototypes, and reservations are being taken for suborbital space flights. With for-profit enterprises carving out a new realm, it is entirely possible that space will one day be a sea of hotels and/or a repository of resources for big business. It is important that regulations are in place for this eventuality. These new developments have great importance, huge implications, and urgency for everyone. New York Times bestselling author Marisa de los Santos returns with *Falling Together*, an emotionally resonant, powerfully moving, and pitch perfect novel about friends, family, and love. It's been six years since Pen Calloway watched Cat and Will, her best friends from college, walk out of her life. Through the birth of her daughter, the death of her father, and the vicissitudes of single motherhood, she has never stopped missing them. When, after years of silence, Cat—the bewitching, charismatic center of their group—urgently requests that the three meet at their college reunion, Pen can't refuse. But instead of a happy reconciliation, what awaits is a collision of past and present that sends Pen and Will on a journey around the world, with Pen's five-year-old daughter and Cat's hostile husband in tow. And as Pen and Will struggle to uncover the truth about Cat, they find more than they bargained for: startling truths about who they were before and who they are now. With her trademark wit, vivid prose, and gift for creating authentic, captivating characters, Marisa de los Santos returns with an emotionally resonant novel about our deepest human connections. A recruiting and retention expert shows how to find and hire people who will have an immediate impact, integrate them into the team, and retain them for the long term. If you have had little formal training in developing financial forecasts in Excel or have ever burnt the

midnight oil trying to get a Balance Sheet to balance, then this book is for you. A simple walkthrough of the common perils and pitfalls of financial modelling, this book constructs a solid foundation to build upon (pun most definitely intended). Taking little for granted, Liam examines the common Excel functions and functionalities necessary, emphasises the importance of a standardised and functional layout, explains accounting concepts simply and reinforces the four key concepts of a "Best Practice" model: Consistency, Robustness, Flexibility and Transparency &- CraFT. With over 50 examples and an extended case study that creates a simple financial model from scratch to highlight the key concepts, this is a "hands on" book, focused on working with Excel more efficiently and effectively. A simple process, this methodology has been adopted by many seasoned professionals without resorting to balancing figures, circulars and macros. If there is a reunion in your future, whether as the organizer or a helping hand, Reunion Planner is one book you won't want to be without. Reunion Planner leaves nothing to chance. The contents include sections on the following: choosing the proper kind of reunion, recruiting volunteers, selecting the time and place, creating the program, guest speakers, budgeting, notifying the participants and promoting the event, planning meals and decorations, accommodations and transportation, souvenirs and fund raisers, photographers and videographers, building a genealogy, and finishing touches from road signs to thank-you notes and more. This book is a survey of typical Science Fiction elements in Douglas Adams's *Hitchhiker's Guide to the Galaxy*. Christian Erkenbrecher first goes through a short history of Science Fiction and identifies certain motifs of the genre in order to correctly place the novel within a useful context. Classical elements of the Science Fiction canon are identified in the novel and scrutinized. It becomes clear that Douglas Adams was fully aware of the SF "burden" and we can see how its elements are used in order to create both humour and criticism. The question of whether social criticism can be applied purposefully in SF will be asked. Other big questions which are posed (and answered?) in *Hitchhikers* are also taken into consideration: Is there a god? Will the breakdown of communication barriers between races put an end to all wars? Can the advancement of technology prevent us from destroying ourselves? Follow the author on his way through Douglas Adams's "wholly

remarkable book" and see how this exceptional hitchhiking playwright and atheist writer enriched the world with his unique prose. Wilson and Dufrene help readers foster the flexibility they need to keep from succumbing to the avoidable forces of anxiety, and open themselves to the often uncomfortable complexities and possibilities of life. Refactoring to microservices A new generation of MEMS books has  
emerged with this cohesive guide on the design and analysis of micro-  
electro-mechanical systems (MEMS). Leading experts contribute to its  
eighteen chapters that encompass a wide range of innovative and varied  
applications. This publication goes beyond fabrication techniques  
covered by earlier books and fills a void created by a lack of industry  
standards. Subjects such as transducer operations and free-space  
microsystems are contained in its chapters. Satisfying a demand for  
literature on analysis and design of microsystems the book deals with a  
broad array of industrial applications. This will interest engineering and  
research scientists in industry and academia. A unique study of the link  
between theology and culture from a sociological perspective which  
addresses the issue of the pursuit of enchantment in the context of  
postmodernity. Sociology is applied to sociology itself to discern its own  
domestic response to theological readings of culture. A novel reading of  
Simmel, Bourdieu and Weber in relation to the Swiss Catholic  
theologian, Hans Urs von Balthasar, produces a controversial critique of  
assumptions regarding religious belief in the context of debates on  
secularisation and postmodernity. This book covers topics including the  
delivery of biologicals using synthetic polymers, cell encapsulation, and  
gene delivery. It deals with the use of synthetic polymers for the purpose  
of isolating biologicals by describing the use of stimulus-responsive  
polymers. Welcome to the gold standard in critical care transport
