Extending Science Planetary Ring Systems General science : a voyage of exploration

Almost forty years ago we launched the "Voyager Space Probe". It was a feat of human ingenuity. The craft explored the outer planets, sending back information and images to expand our knowledge of this universe. When its mission was complete, Voyager left our solar system for interstellar space. Although we stayed in contact with it, we felt its mission was over....but we were wrong. The moment it left our solar system it was detected by an alien race who were unaware of our location. With i NASA operates a large number of space science missions, approximately three-quarters of which are currently in their extended operations phase. They represent not only a majority of operational space science missions, but a substantial national investment and vital national assets. They are tremendously scientifically productive, making many of the major discoveries that are reported in the media and that rewrite textbooks. Extending Science " NASA's Space Science Mission Extensions and the Senior Review Process evaluates the scientific benefits of missions extensions, the current process for extending missions, the current biennial requirement for senior reviews of mission extensions, the balance between starting new missions and extending operating missions, and potential innovative cost-reduction proposals for extended missions, and makes recommendations based on this review. In 1977, two extraordinary spacecraft called Voyager were launched to the stars. Affixed to each Voyager craft was a gold-coated coppered phonograph record as a message to possible extra-terrestrial civilizations that might encounter the spacecraft in some distant space and time. Each record contained 118 photographs of our planet; almost 90 minutes of the world's greatest music; an evolutionary audio essay on "The Sounds of Earth"; and greetings in almost sixty human languages (and one whale language). This book is an account, written by those chiefly responsible for the contents of the Voyager Record, of why they did it, how they selected the repertoire, and precisely what the record contains. Voyager 1 and Voyager 2 were launched in 1977. Since then they have traveled farther than any human object. Voyager 1 is now over 10 billion miles from the sun and is headed to the utmost boundary of our solar system. This book, originally published under the auspices of the Smithsonian Institution, tells the story of their journey through the solar system and beyond. The authors' unparalleled access to NASA archives and imagery make this authoritative work on the subject. The book includes an 8 pages of photographs and computer generated imagery and black and white photos throughout. SUZANNE O'SULLIVAN The Consolations of Physics is an eloquent manifesto for physics. In an age where uncertainty and division is rife, Tim Radford, science editor of the Guardian for twenty-five years, turns to the wonders of the universe for consolation. 'A beautiful, inspiring reflection on science, humanity, space, and matter.' SARAH BAKEWELL From the launch of the Voyager spacecraft and how it furthered our understanding of planets, stars and galaxies to the planet composed entirely of diamond and graphite and the sound of a blacksmith's anvil; from the hole NASA drilled in the heavens to the discovery of the Higgs Boson and the endeavours to prove the Big Bang, The Consolations of Physics will guide you from a tiny particle to the marvels of outer space.
