The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia, in which groups of leading scientists from a range of topics across biology, chemistry and medicine assembled to present papers and discuss results. The Novartis Foundation, originally known as the Ciba Foundation, is well known to scientists and clinicians around the world. This book provides a collection of advanced information systems research, cases and applications in the context of Vietnam, presented by experienced researchers in the field. It provides a comprehensive overview of the field and offers access to practical information systems applications, serving as a guide to comparing the context. Readers can also compare the context of information systems applications in Vietnam as a developing country against the context in developed countries. The book contributes to the body of knowledge in several ways. It provides comprehensive references for information systems research, promotes the recent progress in its applications in Vietnam and offers a shared understanding to serve as a blueprint for future research. From a practical point of view, the book helps organisations/companies in Vietnam to keep up with information systems cases, studies and applications. This book reviews problems with credit use and causes of indebtedness among young adults, while uncovering possibilities to encourage a healthier attitude towards loans in this segment of the population. Both consumption loans and mortgages are covered in order to adequately represent real-world credit use by young people about to enter adulthood. It focuses on three distinctive actors: the legislative authorities, the financial institution, most commonly a bank, and finally the individual borrower. More specifically, the book discusses the functioning of these three entities in the context of young adults borrowing behaviour, and would appeal to academics, researchers and students of financial institutions and banking. This is the first biography, now available in paperback, of Manuel Puig (1932-1990), Argentinian author of Kiss of the Spider Woman and pioneer of high camp. Suzanne Jill Levine, his principal English translator, draws upon years of friendship as well as copious research and interviews Presenting a collection of 15 all-time Anderson favorites arranged for string quartet or string orchestra. Complete works, not excerpts, these unique arrangements can be used by school or professional groups as concert pieces or as encores. Each volume attempts to discuss all aspects – properties, synthesis, reactions, physiological and industrial significance – of a specific ring system. To keep the series up-to-date, supplementary volumes covering the recent literature on each individual ring system have been published. Many ring systems (such as pyridines and oxazoles) are treated in distinct books, each consisting of separate volumes or parts dealing with different individual topics. With all authors are recognized authorities, the Chemistry of Heterocyclic Chemistry is considered worldwide as the indispensable resource for organic, bioorganic, and medicinal chemists. An important resource for the synthesis of intermediates of specialty chemicals, pharmaceuticals and fine chemicals. Aromatic Hydroxyketones from Butanone to Dotriacontanone provides the reader with exhaustive information covering structure, preparation, physicochemical characteristics, as well as a related bibliography. The handbook is presented in dictionary style, with a logical classification of the ketones, making the information easily available for consultation. The book is aimed at those working in research, development and production applications in various industries (chemistry, pharmacy, cosmetics, paints and perfumes). This is volume 3 of the set ^English Radicalism (1935-1961). Reissuing the epic undertaking of Dr S. Maccoby, these volumes cover the story of English Radicalism from its origins right through to its questionable end. By Combining new sources with the old and often long forgotten, the volumes provide an impressive history of radicalism and shed light on the course of English political development. The six volumes are arranged chronologically from 1762 through to the perceived end of British Radicalism in the mid-twentieth century. The Chemistry of Heterocyclic Compounds, since its inception, has been recognized as a cornerstone of heterocyclic chemistry. The volumes of this classic series, now referred to simply as "Zechmeister" after its founder, L. Zechmeister, have appeared under the Springer Imprint ever since the series' inauguration in 1938. The volumes contain contributions on various topics related to the origin, distribution, chemistry, synthesis, biochemistry, function or use of various classes of naturally occurring substances ranging from small molecules to biopolymers. Each contribution is written by a recognized authority in his field and provides a comprehensive and up-to-date review of the topic in question. Addressed to biologists, technologists, and chemists alike, the series can be used by the expert as a source of information and literature citations and by the non-expert as a means of orientation in a rapidly developing discipline. In spite of important advances in asymmetric synthesis, chiral compounds cannot all be obtained in a pure state by asymmetric synthesis. As a result, enantiomer separation remains an important technique for obtaining optically active materials. Although asymmetric synthesis is a once-only procedure, an enantiomer separation process can be repeated until the optically pure sample is obtained. This book discusses several new enantiomer separation methods using modern techniques developed by experts in the field. These methods consist mainly of the following three types: 1) Enantiomer separation by inclusion complexation with a chiral host compound 2) Enantiomer separation using biological methods 3) Enantiomer separation by HPLC chromatography using a column containing a chiral stationary phase. Separation of a racemic compound has been called "optical resolution" or simply "resolution". Nowadays, the descriptions "enantiomer resolution" or "enantiomer separation" are also commonly used. Accordingly, "Enantiomer Separation" is used in the title of this book. The editor and all chapter contributors hope that this book is helpful for scientists and engineers working in this field. Collection of the monthly climatological reports of the United States by state or region with monthly and annual National summaries. To find one's bearings through the luxuriant forest of organic chemistry, sure guide marks are needed. Robert Martin's book is one of these most useful reference marks for each organic chemist. Diversely substituted hydroxyacetophenones are used in numerous sectors of applied organic chemistry. This impressive monography constitutes a considerable work, time-saver for the professional in organic synthesis. For each compound described, R. Martin has clearly and concisely supplied all the information existing in the literature up to 1996. This work enables the chemist to compare their structures, syntheses, properties, physico-chemical characteristics, thus stimulating his imagination. Three exhaustive tables enable the reader to find each compound by its CAS number, official nomenclature and usual name. They secure easy navigation through this large Dictionary. I very much admire the work undertaken and carried through by R. Martin, Chemical Engineer, Conservatoire National des Arts et Metiers, 1961. I am sure this book will be helpful both to industry and university research workers, and I wish it will meet the success it deserves. Dr. Jean-Paul GUETTE Professor Conservatoire National des Arts et Metiers (CNAM) ACKNOWLEDGEMENTS I wish to express my heartfelt thanks to Dr. Pierre Demersemann who accepted me in his Laboratory at Institut Curie in 1987, and kindly revised my manuscript I am also grateful to Dr. J.-P. Buisson, always so amiable and efficient, whose knowledge of word-processing largely contributed to the final page-setting of this work. Containing chemical, physical and structural data on 45,000 organometallics, this new edition of Dictionary of Organometallic Compounds is completely revised and expanded. All compounds from the first edition have been reviewed, new references from the recent chemical literature have been added. Interesting new compounds, which have appeared in the literature from 1985 to 1993, have also been incorporated. A unique new feature is the Index of Synthetic Reagents, which groups compounds according to their use in synthetic organic chemistry. Compounds included: - organometallics representing all important structural types - compounds with an established use, such as original reagents, catalysts, starting materials, laboratory chemicals Type of information included: - accurate systematic chemical names, tradenames, trivial names - CAS Registry numbers - molecular formulae and weights - details on synthesis/preparation - uses in synthetic organic chemistry - physical data including melting/boiling points, solubility, magnetic susceptibility - concise bibliography In this book Linda Colley explores the fate of the tory party which has dominated both Parliament and the constituencies throughout of the reigns of William III and Anne. This is a classic work—a highly-readable, wide-ranging study of the Trilateral Commission and the worldwide strategies of Trilateralism. It demystifies national and international events, power, propaganda, and policy making from World War II through the sixties and seventies and into the eighties. In four volumes, Aromatic Hydroxyketones provides detailed information on the physical properties and syntheses of 6,000 hydroxyketones. Each entry includes basic identification information, including the Chemical Abstracts Service Registry Number, molecule name, molecular formula, and molecular

weight. This resource provides a powerful tool for the synthesis of intermediates of specialty polymers, pharmaceuticals and fine chemicals. The Dictionary of Natural Products is the only comprehensive source of chemical data on natural products. It provides the busy scientist with fast access to chemical, physical, bibliographic, and structural data on over 139,000 natural products organized into more than 43,000 -virtually every natural product isolated and reported in the literature. This is a laboratory text for the mainstream organic chemistry course taught at both two and four year schools, featuring both microscale experiments and options for scaling up appropriate experiments for use in the macroscale lab. It provides complete coverage of organic laboratory experiments and techniques with a strong emphasis on modern laboratory instrumentation, a sharp focus on safety in the lab, excellent pre- and post-lab exercises, and multi-step experiments. Notable enhancements to this new edition include inquiry-driven experimentation, validation of the purification process, and the implementation of greener processes (including microwave use) to perform traditional experimentation. This book provides the first comprehensive evaluation of Britain's food laws from the 1860s to 1930s and the first analysis of the Victorian anti-adulteration legislation in 25 years. The book brings important historical perspectives to the pressing contemporary debate about food safety and the most appropriate forms of regulation by indicating that government policy historically has been shaped by competing business and consumer-protectionist pressures. More than 7000 trade name products and more than 2500 generic chemicals that can be used in formulations to meet environmental concerns and government regulations. This reference is designed to serve as an essential tool in the strategic decision-making process of chemical selection when focusing on human and environmental safety factors. Industries Covered: Adhesives ? Refrigerants ? Water Treatment ? Plastics ? Rubber ? Surfactants ? Paints & Coatings ? Food ? PharmaceuticalsCosmetics ? Petroleum Processing ? Metal Treatment ? TextilesThe chemicals and materials included are used in every aspect of the chemical industry. The reference is organized so that the reader can access the information based on the trade name, chemical components, functions and application areas, 'green' attributes, manufacturer, CAS number, and EINECS/ELINCS number.It contains a unique cross-reference that groups the trade name chemicals by one or more of these green chemical attributes: Biodegradable ? Environmentally Safe ? Environmentally Friendly ? Halogen-Free ? HAP's-Free ? Low Global WarmingLow Ozone-Depleting ? Nonozone-Depleting ? Low Vapor Pressure ? Noncarcinogenic ? Non-CFC ? Non-HCFCNonhazardous ? Nontoxic ? Recyclable ? SARA-Nonreportable ? SNAP (Significant New Alternative Policy) CompliantVOC-Compliant ? Low-VOC ? VOC-Free For thirty years the Labour Party was wracked by conflict over membership of the European Community, swinging back and forth, pro and anti, when in and out of office. It was a conflict that helped keep the party in opposition for eighteen years until it abandoned its socialist basis under New Labour. The author as journalist and European Union official knew many of the major and minor players and brings this experience to bear.
