In this wholly revised and updated second edition, the emphasis is still on detailing factors which distinguish shipping finance from other types of bank lending and explaining the refinements to the basic secured loan that modern, international shipping finance demands. This new edition includes 14 chapters discussing issues such as the uses of swaps and options, the ship mortgage in 16 different jurisdictions, assignments of insurance and earnings and other security issues, equity and debt issues, the banker's perspective, environmental issues, and greater coverage of the conditions and terms of ship mortgage as well as the financing of second-hand ships and of new buildings. Academic Paper from the year 2021 in the subject Health - Public Health, grade: 79.6, Anglia Ruskin University, language: English, abstract: The objective of this report is to conduct a critical and comparative analysis of UK, Ghana and Mexican health system with special emphasis on financial inequalities discerned. The World Health Report, 2000 recommends that the global health care system performances has to be assessed by the average health of the population as well as by how citizen's health status and the financial burden of health care is evenly distributed among the population. This dominant concern with equity is reflected in many modern directives on health, all in an attempt to present an equitable system without financial preference on a global scale. For individuals at the top of the socio-economic spectrum, the multiple mechanisms adopted by UK, Ghana and the Mexican health systems provide excellent care according to any standard. But for the citizens at the bottom of such social distributions, system delivers a little more than a vaccination. The International Handbook of Shipping Finance is a one-stop resource, offering comprehensive reference to theory and practice in the area of shipping finance. In the multibillion dollar international shipping industry, it is important to understand the various issues involved in the finance of the sector. This involves the identification and evaluation of the alternative sources of capital available for financing the ships, including the appraisal and budgeting of shipping investment projects; legal and insurance aspects of ship finance; the financial analysis and modelling of investment projects; mergers and acquisitions; and the commercial and market risk management issues involved. Edited by two leading academics in this area, and with contributions from 25 prominent market practitioners and academics over 16 chapters, this Handbook covers shipping finance and banking, maritime financial management and investments. As such, it includes: shipping markets; asset backed finance; shipbuilding finance; debt finance; public and private equity and debt markets; structured finance; legal aspects and key clauses of ship mortgages; marine insurance; mechanisms for handling defaulted loans; investment appraisal and capital budgeting; financial analysis and investment modelling; business risk management and freight derivatives; and mergers and acquisitions. Thus, the Handbook offers a rigorous understanding of the different aspects of modern shipping finance and maritime financial management and investments, the various characteristics of the available products, the capital needs and requirements, and a clear view on the different financial management strategies through a series of practical examples and applications. Technical where appropriate, but grounded in market reality, this is a "must-have" reference for anyone involved in shipping finance, from bank practitioners and commodity trading houses, to shipbrokers, lawyers and insurance houses as well as to university students studying shipping finance. Table of Contents Preface by Editors Manolis Kavussanos, Professor, Director, MSc in International Shipping, Finance and Management, Athens University of Economics and Business, Greece Ilias Visvikis, Professor, Director Executive Education and Professional Development, World Maritime University, Sweden Chapter 1: Shipping Markets and their Economic Drivers Jan-Henrik Huebner, Head of Shipping Advisory, DNV GL, Germany Chapter 2: Asset Risk Assessment, Analysis and Forecasting in Asset Backed Finance Henriette Brent Petersen, Head of Shipping & Offshore Research, DVB Bank SE, The Netherlands Chapter 3: Overview of Ship Finance Fotis Giannakoulis, Research Vice President, Morgan Stanley, USA Chapter 4: Shipbuilding Finance Charles Cushing, C.R. Cushing & Co. Inc., USA Chapter 5: Debt Financing in Shipping George Paleokrassas, Partner, Watson, Farley & Williams, Greece Chapter 6: Public Debt Markets for Shipping Basil Karatzas, Founder & CEO, Karatzas Marine Advisors & Co., USA Chapter 7: Public and Private Equity Markets Jeffrey Pribor, Global Head, Maritime Investment Banking, Jefferies LLC, USA Cecile Lind, Associate Investment Banking, Jefferies LLC, USA Chapter 8: Structured Finance in Shipping Contributor: Ioannis Alexopoulos, Director, Shipping Financier, Eurofin Group, Greece Nikos Stratis, Managing Director of Augustea Group, UK Chapter 9: Key Clauses of a Shipping Loan Agreement Kyriakos Spoullos, Solicitor, Norton Rose Fulbright, Greece Chapter 10: Legal Aspects of Ship Mortgages Simon Norton, Lecturer, Cardiff Business School, UK Claudio Chisté, Investec Bank Plc., UK Chapter 11: Reasons and Mechanics of Handling Defaulted Shipping Loans and Methods of Recovery Dimitris Anagnostopoulos, Board Member & Director, Aegean Baltic Bank, Greece Philippos Tsamanis, VP - Head of Shipping, Aegean Baltic Bank, Greece Chapter 12: Marine Insurance Marc Huybrechts, Professor, University of Antwerp, Belgium Theodora Nikaki, Associate Professor, Swansea University, UK Chapter 13: Maritime Investment Appraisal and Budgeting Wolfgang Drobetz, Professor, University of Hamburg, Germany Stefan Albertijn, CEO, HAMANT Beratungs-und Investitions GmbH, Germany Max Johns, Managing Director, German Shipowners' Association, Germany Chapter 14: Financial Analysis and Modelling of Ship Investments Lars Patterson, Shipping Investment Analyst, Pacomarine Limited, UK Chapter 15: Maritime Business Risk Management Manolis Kavussanos, Professor, Director, MSc in International Shipping, Finance and Management, Athens University of Economics and Business, Greece Ilias Visvikis, Professor, Director Executive Education and Professional Development, World Maritime University, Sweden Chapter 16: Mergers and Acquisitions in Shipping George Alexandridis, Associate Professor, ICMA Centre, University of Reading, UK Manish Singh, Manish Singh, Group Director - Strategy and M&A, V. Group Limited, UK The recent expansion of health insurance coverage in the USA under the Affordable Health Care Act, and current threats to reverse the benefits of this reform, have once again focused the world's attention on the difficult challenges faced by other countries trying to provide better access to healthcare to their population at an affordable cost. This textbook provides a comparative review of financing universal access to healthcare in the Organisation for Economic Co-operation and Development (OECD) countries. The first two chapters of the book provide a framework for financing universal access to healthcare. The remaining eight chapters present case studies of eight OECD countries that have successfully introduced reforms to finance universal access to healthcare for their population through landmark legislative reforms. A concluding chapter focuses on the lessons learned from the OECD and recommendations from policymakers and others who are planning similar reforms. The book is designed as a learning tool for students and as a user guide for policymakers. Contents: Introduction Principles and Practice The UK Canada Australia New Zealand Denmark Norway Sweden Finland Summary of Lessons Learned Readership: Graduate and research-level students and instructors of healthcare financing, healthcare policymakers, and healthcare professionals and investors. Keywords: Universal;Health Financing;Health Insurance;Health Reform;Financial Protection;Political Process;HealthcareReview: "The International Hospital Federation (IHF) is committed to advancing the UHC agenda throughout the world, giving billions of people better access to critical hospital care and basic health services when needed, no matter their income or geographic location in the world. Since its establishment in 1929, the IHF recognizes the essential role of hospitals and health care organizations in providing health care, supporting health services and offering education to health care providers as a critical partner in during the drive for UHC throughout the world. This volume is a tribute to the renewed effort in achieving 'Health for All'." Eric de Roodenbeke Executive Director International Hospital Federation Geneva 2018 "This year, as we commemorate the 40th Anniversary of the Alma-Ata Declaration of 'Health for All' in Almaty, Kazakhstan, 1978 and the 70th Anniversary of the UK National Health Service, 1948, we also celebrate the great achievement over the past decades in bringing access to affordable and quality health care for billions of people across the world since the 1950s. Looking forward, at the recent Universal Health Coverage Forum 2017 in Tokyo Japan, the international development community — including both bi-laterals and multi-laterals — committed to the 'Tokyo Declaration on Universal Health Coverage: All Together to Accelerate Progress towards UHC'. This text book makes a valuable contribution by reviewing the political, policy and implementation challenges that countries face in achieving this agenda. The approach used to analyze the eight case studies presented in the volume is a seminal work in comparative health policy." James Christopher Lovelace International Health and Development Advisor Former Director, Health Nutrition and Population, World Bank Former Assistant Deputy Minister of Health, Government of BC, Canada Former Director General of Health, Government of New Zealand Key Features: The main distinguishing feature of this book is to compare OECD countries that have successful experiences in addressing the policy challenges and p What are public health services? Countries across Europe understand what they are or what they should include differently. This study describes the experiences of nine countries detailing the ways they have opted to organize and finance public health services and train and employ their public health workforce. It covers England France Germany Italy the Netherlands Slovenia Sweden Poland and the Republic of Moldova and aims

to give insights into current practice that will support decision-makers in their efforts to strengthen public health capacities and services. Each country chapter captures the historical background of public health services and the context in which they operate; sets out the main organizational structures; assesses the sources of public health financing and how it is allocated; explains the training and employment of the public health workforce; and analyses existing frameworks for quality and performance assessment. The study reveals a wide range of experience and variation across Europe and clearly illustrates two fundamentally different approaches to public health services: integration with curative health services (as in Slovenia or Sweden) or organization and provision through a separate parallel structure (Republic of Moldova). The case studies explore the context that explain this divergence and its implications. This study is the result of close collaboration between the European Observatory on Health Systems and Policies and the WHO Regional Office for Europe Division of Health Systems and Public Health. It accompanies two other Observatory publications Organization and financing of public health services in Europe and The role of public health organizations in addressing public health problems in Europe: the case of obesity alcohol and antimicrobial resistance (both forthcoming). Deep coverage and rigorous examination of international corporate finance Multinational Finance offers an advanced exploration of international corporate finance concepts and operations. Despite its status as one of the most rigorous texts on the topic, this book remains accessible and readable without sacrificing depth of coverage. Sidebars, key terms, essays, conceptual questions, and problems with solutions help aid in the learning process, while suggested readings and PowerPoint handouts reinforce the material and offer avenues for further exploration. This new sixth edition includes Excel templates that allow students to use real-world tools in a learning environment, and the modular structure facilitates course customization to individual objectives, interests, and preparatory level. The emphasis is on the basics of financial management, but coverage includes unique chapters on treasury management, asset pricing, hedging, options, and portfolio management in addition to traditional finance topics. International finance is a diverse field with myriad specialties and a vast array of possible interests. This book allows students to view the field through the lens of a financial manager with investment or financial options in more than one country to give them a practical feel for real-world application. Understand the nature and operations of international corporate finance Evaluate opportunities, costs, and risks of multinational operations See beyond the numbers and terminology to the general principles at work Learn the markets, currencies, taxation, capital structure, governance, and more Comprehensive, adaptable, and rigorously focused, this book gives students a solid foundation in international corporate finance, as well as a sound understanding of the tools and mechanics of the field. Designed for MBA and advanced undergraduate courses, Multinational Finance provides the deep coverage so essential to a solid education in finance. This book is devoted to recent developments and applications of multiple criteria decision aid tools in the field of finance, insurance and investment. It illustrates recent methods and procedures designed to solve problems related to finance, insurance and portfolio selection formulated through a mathematical programming framework and for which a large number of conflicting and incommensurable objectives (criteria, attributes) is simultaneously optimized. The book introduces researchers and practitioners to recent theoretical and methodological developments in multi-attributes portfolio selection, multiple criteria analysis in finance, insurance and investment. It is based on selected and invited papers presented and discussed at the 2013 International Conference on Multidimensional Finance, Insurance and Investment (ICMFII'13), held at the College of Business Administration at the University of Bahrain from 25th to 27th November 2013 with the co-sponsorship of the International Society on Multiple Criteria Decision Making and the Institute for Operations Research and the Management Sciences - MCDM section. Praise for Structured Finance & Insurance "More and more each year, the modern corporation must decide what risks to keep and what risks to shed to remain competitive and to maximize its value for the capital employed. Culp explains the theory and practice of risk transfer through either balance sheet mechanism such as structured finance, derivative transactions, or insurance. Equity is expensive and risk transfer is expensive. As understanding grows, and, as a result, costs continue to fall, ART will continue to replace equity as the means to cushion knowable risks. This book enhances our understanding of ART." --Myron S. Scholes, Frank E. Buck Professor of Finance, Emeritus, Graduate School of Business, Stanford University "A must-read for everyone offering structured finance as a business, and arguably even more valuable to any one expected to pay for such service." --Norbert Johanning, Managing Director, DaimlerChrysler Financial Services "Culp's latest book provides a comprehensive account of the most important financing and risk management innovations in both insurance and capital markets. And it does so by fitting these innovative solutions and products into a single, unified theory of financial markets that integrates the once largely separate disciplines of insurance and risk management with the current theory and practice of corporate finance." --Don Chew, Editor, Journal of Applied Corporate Finance (a Morgan Stanley publication) "This exciting book is a comprehensive read on alternative insurance solutions available to corporations. It focuses on the real benefits, economical and practical, of alternatives such as captives, rent-a-captive, and mutuals. An excellent introduction to the very complex field of alternative risk transfer (ART)." --Paul Wohrmann, PhD, Head of the Center of Excellence ART and member of the Executive Management of Global Corporate in Europe, Zurich Financial Services "Structured Finance and Insurance transcends Silos to reach the Enterprise Mountaintop. Culp superbly details integrated, captive, multiple triggers and capital market products, and provides the architectural blueprints for enterprise risk innovation." --Paul Wagner, Director, Risk Management, AGL Resources Inc. This Handbook covers major topics in global health economics and public policy and provides a timely, systematic review of the field. Edited by Richard M Scheffler, Distinguished Professor of Health Economics and Public Policy and Director of the Global Center for Health Economics and Policy Research at the University of California, Berkeley, the Handbook features academics and practitioners from more than a dozen countries. Contributors are from the London School of Economics and Political Science, Pompeu Fabra University in Barcelona, University of York, University of Oslo, London School of Hygiene and Tropical Medicine, University of California - Berkeley, Stanford University, Johns Hopkins University, University of Toronto, University of Oxford, Harvard Medical School, OECD, the World Health Organization and the World Bank, many of whom have also acted as economic and policy advisors to government and non-governmental organizations across the world. Experts in these areas who provide critical analyses and relevant data for further exploration and research include: Thomas E Getzen, Executive Director of the International Health Economics Association (iHEA); Douglas E Hough, Associate Scientist and Associate Director of the Master in Healthcare Management programme at the Bloomberg School of Public Health of John Hopkins University; Guillem López-Casasnovas, former President of iHEA and member of the Advisory Council of the Spanish Health and Social Welfare Ministry and of the Advisory Council of the Catalan Health Ministry since 1984; Alistair McGuire, Professor of Health Economics at the London School of Economics and Political and advisor to a number of governments and governmental bodies across Europe; Tor Iversen, Research Director at the Health Economics Research Programme at the University of Oslo and former member of the iHEA Arrow Award Committee 2007-2011; William H Dow, Professor and Associate Dean for Research at University of California, Berkeley and former Senior Economist for the Council of Economic Advisors (White House); Audrey Laporte, the Director of the Canadian Centre for Health Economics; Alexander S Preker, President and CEO of Health Investment & Financing Corporation; Ayda Yurekli, who initiated and developed the World Health Organization TaXSiM simulation model that has been used by many Ministries of Finance around the world for the development of tax policies; Marko Vujcic, Managing Vice President of the Health Policy Resources Center at the American Dental Association; Mark Sculpher, Director of the Programme on Economic Evaluation and Health Technology Assessment at the University of York and former President of the International Society of Pharmacoeconomics and Outcomes Research (ISPOR) (2011-2012); and Peter Berman, who has had almost 40 years of experience in global health and was formerly a Lead Health Economist at the World Bank. The Handbook spans across three volumes. The chapters deal with key global issues in health economics, are evidence-based, and offer innovative policy alternatives and solutions. The Handbook's approach toward global health economics and public policy will make it a useful resource for health economists, policymakers, private sector companies, NGOs, government decision-makers and those who manage healthcare systems. Forecasts predict that those in need of long-term care in Europe will double in the next 50 years. This book offers a full understanding of the institutional responses and mechanisms in place to finance old age and provides analysis of demand and supply factors underpinning the development of financial instruments to cover long-term care in Europe. Published with the contribution of the Italian insurance company, INA, this volume contains the invited contributions presented at the 3rd International AFIR Colloquium. In the spirit of actuarial tradition, the colloquium paid attention to the link between the theoretical approach and the operative problems of financial markets and institutions, and insurance companies in particular. The book is thus an important reference work for students and researchers of actuarial sciences and finance, and is also recommended to practitioners with theoretical interests. This book presents comprehensive coverage of project finance in Europe and North America. The Second Edition features two new case studies, all new pedagogical supplements including end-of-chapter questions and answers, and insights into the recent market downturn. The author provides a complete description of the ways a project finance deal can be organized - from industrial, legal, and financial standpoints - and the alternatives available for funding it. After reviewing recent advances in project finance theory, he provides illustrations and case studies. At key points Gatti brings in other project finance experts who share their specialized knowledge on the legal issues and the role of advisors in project finance deals. Forward by William Megginson, Professor and Rainbolt Chair in Finance, Price College of Business, The University of Oklahoma Comprehensive coverage of theory and practice of project finance as it is practiced today in Europe and North America Website contains interactive spreadsheets so that readers can input data and run and compare various scenarios, including up to the minute treatment of the cutting-edge areas of PPPs and the new problems raised by Basel II related to credit risk measurement "A reader's first impression on leafing through this book is of the large number of graphs and diagrams, used to illustrate shapes of distributions...and to show real data examples in various ways. A closer reading reveals a nice mix of theory and applications, with the copious graphical illustrations alluded to. Such a mixture is of course dear to the heart of the applied probabilist/statistician, and should impress even the most ardent theorists." --MATHEMATICAL REVIEWS Comprehensive coverage of all major structured finance transactions Structured Finance is a comprehensive introduction to non-recourse financing techniques and asset-based lending. It provides a detailed overview of leveraged buyouts, project finance, asset finance and securitisation. Through thirteen case studies and more than 500 examples of companies, the book offers an in-depth analysis of the topic. It also provides a historical perspective of these structures, revealing how and why they were initially created. Instruments within each type of transaction are examined in detail, including Credit Default Swaps and Credit Linked Notes. A presentation of the Basel Accords offers the necessary background to understand the regulatory context in which these financings operate. With this book, readers will be able to: Delve into the main structured finance techniques to understand their components, mechanisms and how they compare Understand how structured finance came to be, and why it continues to be successful in the modern markets Learn the characteristics of financial instruments found in various structured transactions Explore the global context of structured finance, including the regulatory framework under which it operates Structured Finance provides foundational knowledge and global perspective to facilitate a comprehensive understanding of this critical aspect of modern finance. It is a must-read for undergraduate and MBA students and finance professionals alike. Ghana is one of only several African countries to enact legislation and earmark financing for universal health insurance coverage for its entire population. Seven years into its implementation the Ghana National Health Insurance Scheme (NHIS) has made significant progress in transitioning to universal coverage, but faces significant fiscal and coverage challenges. This study reviews Ghana's

health financing system with a special emphasis on its National Health Insurance Scheme. Such an assessment is important because Ghana is often considered a global 'good practice' in terms of earmarking significant amounts of its general revenues for health insurance coverage, providing formal coverage to its vulnerable population groups, and extending coverage by transitioning its existing community health insurance schemes into a national health insurance program. In addition to the global interest in the Ghana 'model', this review is timely in view of recent critiques of the system and questions about its financial sustainability. The study is also unique in terms of evaluating Ghana's NHIS in terms of basic health system goals of health outcomes, financial protection, consumer satisfaction, equity, efficiency, and financial sustainability. The strengths and weaknesses of Ghana's health financing system are assessed on the basis of these performance goals to provide the current health policy reform baseline. The assessment is also based on several new and updated sources of information on: total health spending, inputs, outcomes, household spending, and the macro economy. It also undertakes for the first time an extensive international benchmarking analysis; assesses the financial protection/equity of the system at both macro and micro levels; and, contains an extensive fiscal space analysis based on Ghana's new macroeconomic realities (i.e., the revaluation of Ghana's Gross Domestic Product (GDP) upward by some 60 percent in November 2010, making Ghana a lower middle income country). The study concludes with an assessment of potential structural and operational reform options to assure NHISs long-term efficacy and sustainability in the context of its future available fiscal space. China's current social medical insurance system has nominally covered more than 95 per cent of 1.4 billion population in China and is moving towards the ambitious goal of universal health insurance coverage. Challenges posed by a rapidly ageing population, an inherently discriminatory design of the health insurance system, the disorder of drug distribution system and an immature legal system constrain the Chinese government from realizing its goal of universal health insurance coverage in the long run. This book uses a refined version of historical institutionalism to critically examine China's pathway to universal health insurance coverage since the mid-1980s. It pays crucial attention to the processes of transforming China's healthcare financing system into the basic social medical insurance system alongside rapid socio-economic changes. Financing Healthcare in China will interest researchers and government and think-tank officials interested in the state of healthcare reforms in China. Healthcare specialists outside of East Asia may also be interested in its general study of healthcare in developing countries. Scholars and students interested in the healthcare field will also find this useful. In 1990, Carmelo Mesa-Lago, the foremost authority on social security in Latin America, concluded that all of the region's programs were imperiled, especially those in the most advanced nations. His study of twenty countries, originally sponsored by the United Nations Economic Commission for Latin America, critically reviews major financial problems, low and uneven population coverage, erosion in benefits, increasing costs, and the impact of social security on development. In words that eerily echo current U.S. debates, Mesa-Lago analyzes virtually all social insurance programs: old age, disability and survivors' pensions; health care; occupational hazards; family allowances; and unemployment. For social security specialists, this impressive study will serve as a comprehensive regional handbook on the legal, administrative, and financial features of Latin America's programs. Students of comparative policy and applied economics will find Mesa-Lago's methodology, analytical framework, and policy recommendations invaluable. In 2015, building on the advances of the Millennium Development Goals, the United Nations adopted Sustainable Development Goals that include an explicit commitment to achieve universal health coverage by 2030. However, enormous gaps remain between what is achievable in human health and where global health stands today, and progress has been both incomplete and unevenly distributed. In order to meet this goal, a deliberate and comprehensive effort is needed to improve the quality of health care services globally. Crossing the Global Quality Chasm: Improving Health Care Worldwide focuses on one particular shortfall in health care affecting global populations: defects in the quality of care. This study reviews the available evidence on the quality of care worldwide and makes recommendations to improve health care quality globally while expanding access to preventive and therapeutic services, with a focus in low-resource areas. Crossing the Global Quality Chasm emphasizes the organization and delivery of safe and effective care at the patient/provider interface. This study explores issues of access to services and commodities, effectiveness, safety, efficiency, and equity. Focusing on front line service delivery that can directly impact health outcomes for individuals and populations, this book will be an essential guide for key stakeholders, governments, donors, health systems, and others involved in health care. World Bank Technical Paper No. 348. This second of a two-volume report on trends in health and health care in Central and Eastern Europe supplies a statistical annex to the first volume, which carried the main report. The annex describes the data analyzed in Volume I and contains comprehensive charts and tables of epidemiological, demographic, and health financing indicators for the period 1987-95. It also describes the data sources and discusses the quality of the data. Also available: "Trends in Health Status, Services, and Finance: The Transition in Central and Eastern Europe". Volume I. World Bank Technical Paper No. 341. November 1996. 56 pages. Stock no. 13751 (ISBN 0-8213-3751-3). Health care reform has dominated public discourse over the past several years, and the recent passage of the Affordable Care Act, rather than quell the rhetoric, has sparked even more debate. Donald A. Barr reviews the current structure of the American health care system, describing the historical and political contexts in which it developed and the core policy issues that continue to confront us today. This comprehensive analysis introduces the various organizations and institutions that make the U.S. health care system work—or fail to work, as the case may be. A principal message of the book is the seeming paradox of the quality of health care in this country—on the one hand it is the best medical care system in the world, on the other it is one of the worst among developed countries because of how it is organized. Barr introduces readers to broad cultural issues surrounding health care policy, such as access, affordability, and quality. He discusses specific elements of U.S. health care, including insurance, especially Medicare and Medicaid, the shift to for-profit managed care, the pharmaceutical industry, issues of long-term care, the plight of the uninsured, medical errors, and nursing shortages. The latest edition of this widely adopted text updates the description and discussion of key sectors of America's health care system in light of the Affordable Care Act. This book provides a comprehensive overview of funding arrangements for explicit deposit insurance schemes. Responding to international guidelines and best practice, it discusses policy decisions and operational challenges which deposit insurers face in the financial management of ex-ante deposit insurance funds. Numerous examples are provided, and solutions offered on sources and uses of funds, focusing on target and optimal funding. Coverage includes: the role that modern deposit insurance schemes play in ensuring financial stability how to design the main deposit insurance features in order to maximize compliance with international standards the different types of funding and financial planning for deposit insurance methods for setting the target fund size level optimal deposit insurance funding challenges faced by the European Union members following new deposit insurance and bank resolution directives. The book concludes by providing a comprehensive overview of funding issues and recommendations for deposit insurance schemes in the European Union. In providing support for disaster-prone areas such as the Caribbean, the development community has begun to progress from disaster reconstruction assistance to funding for investment in mitigation as an explicit tool for sustainable development. Now it must enter a new phase, applying risk transfer mechanisms to address the financial risk of exposure to catastrophic events that require funding beyond what can be controlled solely through mitigation and physical measures. Focusing on the three health care financing functions, collection, pooling and purchasing, as well as on coverage, this book analyses the organization of health care financing in the Member States of the European Union, discusses the principal financing reform trends of recent years, and assesses the capacity of these to help ensure fiscal sustainability. This book uses a revised version of Kingdon's multiple-streams framework to examine health financing reforms in China, Hong Kong, Taiwan, and the Republic of Korea (ROK) as well as long-term care insurance (LTCI) reforms in Japan and Singapore. It shows that the explanatory power of the multiple-streams framework can be strengthened through enriching the concepts of policy entrepreneurs, ideas, and windows of opportunity in the original framework as well as bringing the theoretical lens of historical institutionalism into the framework. Trade finance is the backbone of international trade for entities ranging from a small businesses to multi-national corporations. An estimated 80 percent of world trade relies on this form of finance (WTO, 2017). Despite its systemic importance and rapid growth, data availability is only partial. During the 2008 financial crisis, policy makers, notably the G20 recognized that the absence of comprehensive trade finance data posed a significant hurdle for policy-makers to make informed, timely decisions. This paper proposes a stand-alone dataset to reflect the scope, dynamic and recent innovations of the trade finance market to support macroeconomic policy analysis. Stochastic Processes for Insurance and Finance offers a thorough yet accessible reference for researchers and practitioners of insurance mathematics. Building on recent and rapid developments in applied probability, the authors describe in general terms models based on Markov processes, martingales and various types of point processes. Discussing frequently asked insurance questions, the authors present a coherent overview of the subject and specifically address: The principal concepts from insurance and finance Practical examples with real life data Numerical and algorithmic procedures essential for modern insurance practices Assuming competence in probability calculus, this book will provide a fairly rigorous treatment of insurance risk theory recommended for researchers and students interested in applied probability as well as practitioners of actuarial sciences. Wiley Series in Probability and Statistics The paper explores the role that Social Health Insurance (SHI), as an organisational mechanism for raising and pooling additional funds, can play in financing health services in India. It formulates an SHI concept and its aims for India and examines case studies of different countries that have sought to finance their health services through SHI to see what lessons they offer for India and suggests a suitable design for India. It then estimates the volumes of tax revenues and payroll contributions that may be obtainable by India through SHI. Towards the end it also outlines some of the important design elements that need to be kept in mind for a successful implementation of an SHI scheme in India and identifies some of the important political and macro-level conditions that would be necessary to implement SHI in India. For the first time, a single reference identifies medical technology assessment programs. A valuable guide to the field, this directory contains more than 60 profiles of programs that conduct and report on medical technology assessments. Each profile includes a listing of report citations for that program, and all the reports are indexed under major subject headings. Also included is a cross-listing of technology assessment report citations arranged by type of technology headings, brief descriptions of approximately 70 information sources of potential interest to technology assessors, and addresses and descriptions of 70 organizations with memberships, activities, publications, and other functions relevant to the medical technology assessment community. In 2004 the Indonesian government made a commitment to provide its entire population with health insurance coverage through a mandatory public health insurance scheme. It has moved boldly already provides coverage to an estimated 76.4 million poor and near poor, funded through the public budget. Nevertheless, over half the population still lacks health insurance coverage, and the full fiscal impacts of the government's program for the poor have not been fully assessed or felt. In addition, significant deficiencies in the efficiency and equity of the current health system, unless addressed will exacerbate cost pressures and could preclude the effective implementation of universal coverage (Ue and the desired result of improvements in population health outcomes and financial protection. For Indonesia to achieve UC, systems' performance must be improved and key policy choices with respect to the configuration of the health financing system must be made. Indonesia's health system performs well with respect to some health outcomes and financial protection, but there is potential for significant improvement. High-level political decisions are necessary on key elements of the health financing reform package. The key transitional questions to get there include: [ the benefits that can be afforded and their impacts on health outcomes and financial protection; [ how the more than 50 percent of those currently without coverage will be insured; [ how to pay medical care providers to assure access, efficiency, and quality; [ developing a streamlined

and efficient administrative structure; [ how to address the current supply constraints to assure availability of promised services; [ how to raise revenues to finance the system, including the program for the poor as well as currently uninsured groups that may require government subsidization such as the more than 60 million informal sector workers, the 85 percent of workers in firms of less than five employees, and the 70 percent of the population living in rural areas. "This World Health Report was produced under the overall direction of Carissa Etienne ... and Anarfi Asamoah Baah ... The principal writers were David B. Evans ... [et al] -- t.p. verso. Study Agenda CHAPTER 3 Linear Simulation Model and Data in National Health Insurance 1. Simplifying Assumption 2. National Health Insurance 3. Data Used for Simulation Model Calculation CHAPTER 4 Analysis Results of Equity Improvements Simulation 1. Analysis Methodology 2. Analysis on Health Insurance Results CHAPTER 5 Conclusion and Policy Implications Reference The restructuring of health financing policy in most countries has been intensified following the World Health Assembly Resolution in 2005 by Member States to introduce or strengthen universal coverage policy. The goals of universal coverage are: to offer households financial risk protection (FRP) in order to avoid catastrophic spending and impoverishment from seeking care; to ensure equal access to health care based on relative need irrespective of ability to make health payments, social status and geographical location. This is achievable through increased prepayment of health care through general tax revenue and social health insurance, two health financing mechanism that guarantee universal coverage. Given their long experience as universal systems, OECD countries provide valuable lessons to low-to-middle income (LMICs) countries considering the introduction of universal coverage policy. The policy implications for LMICs from the OECD countries given their long experience as universal systems are fundamental in informing the policy process.
