The *Text of the New Testament in Contemporary Research* provides up-to-date discussions of every major aspect of New Testament textual criticism. Written by internationally acknowledged experts, the twenty-four essays evaluate all significant advances in the field since the 1950s. *Text, Cases and Materials on Equity and Trusts* has been considerably revised to broaden the focus of the text in line with most LLB core courses to encompass equity, remedies and injunctions and to take account of recent major statutory and case law developments. The new edition features increased pedagogical support to outline key points and principles and improve navigation; 'notes' to encourage students to reflect on areas of complexity or controversy; and self-test questions to consolidate learning at the end of each chapter. New to this edition: is a detailed examination of The Civil Partnership Act 2004 and the Charities Act 2006 important case law developments such as *Stack v Dowden* (constructive trusts and family assets), *Oxley v Hiscock* (quantification of family assets), *Barlow Clowes v Eurotrust* (review of the test for dishonesty), *Abou-Ramah v Abacha* (dishonest assistance and change of position defence), *AG for Zambia v Meer Care & Desai* (review of the test for dishonesty), *Horley Town Football Club* (gifts to unincorporated association), *Re Loftus* (defences of limitation, estoppel

and laches), *Templeton Insurance v Penningtons Solicitors* (Quistclose trust and damages) and many more are new chapters on the equitable remedies of specific performance, injunctions, rectification, rescission and account are extracts from the Law Commission's Reports and consultation papers on 'Sharing Homes' and 'Trustee Exemption Clauses' as well as key academic literature and debates. The structure and style of previous editions have been retained, with an emphasis on introductory text and case extracts of sufficient length to allow students to develop analytical and critical skills in reading legal judgments. Substantial author commentary helps the text give the flow, coherence and direction of a textbook whilst providing the reader with a wide range of primary and secondary material from a variety of sources. A supporting Companion Website provides twice-annual updates to the cases and legislation discussed within the text; answers to the questions contained within the text, and sample essay questions.

<http://www.routledgecavendish.com/textbooks/9780415442947> A Text-Book of Roman Law from Augustus to Justinian by William Warwick Buckland, first published in 1921, is a rare manuscript, the original residing in one of the great libraries of the world. This book is a reproduction of that original, which has been scanned and cleaned by state-of-the-art publishing tools for better readability and enhanced appreciation. Restoration Editors' mission is to bring long out of print manuscripts back to life. Some smudges, annotations or unclear text may still exist, due to permanent damage to the original work. We believe the literary significance of the text justifies offering this reproduction, allowing a new generation to appreciate it. Combining a new genealogy for the gothic novel with original research into gothic contexts in German idealist thought and romantic psychology, *The Gothic Text* offers lively readings of British and Continental novels pointing back toward the Enlightenment and ahead toward Freud. This original new book represents a variety of art forms across different professional contexts. Its focus is on the ways that educational practitioners and leaders from a range of cultures, disciplines, professions and organizations practice arts-based research, and it explores how these can enable innovative means of learning and enhance professional and organizational development. This vibrant project allowed for long term systematic conversations between a large and unusually diverse group of twenty-nine people from eight organisations in six countries. It was unusually diverse in many senses: for some the word 'data' meant little, for others it was central to their daily work; for some artistic practice was core, while for others the arts were a means to an end; while some were social entrepreneurs running their own companies others were researching in universities and a number were doing both; some were working within the STEM disciplines of business, management, engineering, science, technology, sustainability and the built environment, others were in the social sciences of social and health care, education and youth work while others were engaged in rapid or long term social and cultural action as a means of resisting state violence and military occupation; some worked in one of the safest countries on the planet, others in one of the most tear-gassed refugee camps in the world. Within these professional groups there were also ranges of experience, for example senior researchers, early career researchers, PhD students, seasoned professional artists and newcomers to arts forms. Whilst the main

communication of this group was English, six other major languages were spoken, Estonian, Finnish, Catalan, Spanish, Arabic and key stakeholders brought Swedish and Japanese into the space. This meant that while the conversations in and about arts-based practice were transnational, interdisciplinary and systematic, they had all the messy, troubled-ness that the intercultural on all of the above levels brings with it. This unique and exciting collection discusses how creative arts practices can have a significant impact on research across a range of international contexts, drawing on their own field of research and educational experience. For instance, drama, music, dance and visual arts can be used to understand how learners internalise concepts, reflect on how decisions are made in the midst of action in leadership education, or investigate the use of the intuitive alongside the rational and analytical in their educational experience. Non-textual arts-based forms of research can also provide modes of investigation into pedagogical and professional practices when applied to fields that normally lie outside of the arts. Its greatest strengths are its focus on arts-based research as a way of learning in a variety of contexts, and often in collaboration. Its consistent theoretical, artistic and professional engagements make it a very readable and engaging read. The representation of a variety of art forms across different professional contexts means that this book will have appeal to several readerships in higher education, including the following groups. Academics and practitioners using arts-based methods in organisation and business settings. Researchers in the arts and researchers generically in the social sciences, humanities and arts. University students of the arts, education and professional studies, especially those interested in the wider international and intercultural diversity of research methodologies. Those working in international research teams using any form of qualitative research will also find this collection very interesting. It also has potential interest for groups outside higher education with an interest in arts-based research – for example community groups looking to explore collaborative projects. One consequence of the pervasive use of computers is that most documents originate in digital form. Widespread use of the Internet makes them readily available. Text mining – the process of analyzing unstructured natural-language text – is concerned with how to extract information from these documents. Developed from the authors' highly successful Springer reference on text mining, *Fundamentals of Predictive Text Mining* is an introductory textbook and guide to this rapidly evolving field. Integrating topics spanning the varied disciplines of data mining, machine learning, databases, and computational linguistics, this uniquely useful book also provides practical advice for text mining. In-depth discussions are presented on issues of document classification, information retrieval, clustering and organizing documents, information extraction, web-based data-sourcing, and prediction and evaluation. Background on data mining is beneficial, but not essential. Where advanced concepts are discussed that require mathematical maturity for a proper understanding, intuitive explanations are also provided for less advanced readers. Topics and features: presents a comprehensive, practical and easy-to-read introduction to text mining; includes chapter summaries, useful historical and bibliographic remarks, and classroom-tested exercises for each chapter;

explores the application and utility of each method, as well as the optimum techniques for specific scenarios; provides several descriptive case studies that take readers from problem description to systems deployment in the real world; includes access to industrial-strength text-mining software that runs on any computer; describes methods that rely on basic statistical techniques, thus allowing for relevance to all languages (not just English); contains links to free downloadable software and other supplementary instruction material. Fundamentals of Predictive Text Mining is an essential resource for IT professionals and managers, as well as a key text for advanced undergraduate computer science students and beginning graduate students. Dr. Sholom M. Weiss is a Research Staff Member with the IBM Predictive Modeling group, in Yorktown Heights, New York, and Professor Emeritus of Computer Science at Rutgers University. Dr. Nitin Indurkha is Professor at the School of Computer Science and Engineering, University of New South Wales, Australia, as well as founder and president of data-mining consulting company Data-Miner Pty Ltd. Dr. Tong Zhang is Associate Professor at the Department of Statistics and Biostatistics at Rutgers University, New Jersey. The question of the relation between the visual and the textual in literature is at the heart of an increasing number of scholarly projects, and in turn, the investigation of evolving visual-verbal dynamics is becoming an independent discipline. This volume explores these profound literary shifts through the work of twelve talented, and in some cases, emerging scholars who study text and image relations in diverse forms and contexts. The inter-medial conjunctures investigated in this book play with and against the traditional roles of the visual and the verbal. The Future of Text and Image presents explorations of the incorporation of visual elements into works of literature, of visual writing modes, and of the textuality and literariness of images. It focuses on the special potential literature offers for the combination of these two functions. Alongside examinations of major forms and genres such as memoirs, novels, and poetry, this volume expands the discussion of text and image relations into more marginal forms, for instance, collage books, the PostSecret collections of anonymous postcards, and digital poetry. In other words, while exploring the destiny of text and image as an independent discipline, this volume simultaneously looks at the very literal future of text and image forms in an ever-changing technological reality. The essays in this book will help to define the emergent practices and politics of this growing field of study, and at the same time, reflect the tremendous significance of the visual in today's image culture. formats using XSLT transformations. The two main text analytics architectures, GATE and UIMA, are then described and compared, with practical exercises showing how to configure and customize them. The final chapter is an introduction to text analytics, describing the main applications and functions including named entity recognition, coreference resolution and information extraction, with practical examples using both open source and commercial tools." --Book Jacket. This text combines a historical view of media texts with a critical look at their textual diversity. The 13 chapters cover early newspapers and pamphlets, present-day news stories and commentaries, TV talk shows and commercials as well as Internet presentations. The studies focus on the wide range of text types in 18th century newspapers and the interpersonal strategies of pamphlets. They

pursue the sophisticated postmodernist and multilingual examples of today. Other topics are the definition and structure of news stories and commentaries, the interpersonal and multi-modal aspects of talkshows and the questioning of the journalist's role in the age of the Internet. Review: "Following on from the widely acclaimed *The Actor and the Text*, Cicely Berry draws on her group work to emphasise how actors and directors can use the rehearsal process to heighten their collective awareness of language." "Our first acquaintance with a play is from reading it, either alone or as part of a group. During this process we concentrate on making sense of it, which can prevent us from listening to what the sound and texture of the language are telling us. The world of a play is created by its language; the imagery, rhythm and speech structures all contribute to its representation of reality." "Focusing primarily on Shakespeare, but with techniques that can be applied to modern texts too, *Text in Action* sets out language work that can be done by the whole group to uncover different layers of meaning within the text. It opens up new interpretations and possible reactions."--Jacket Text, translation, theology - the three nouns in the title indicate the main fields of Old Testament study which are covered in this collection of essays. Text refers both to the history of biblical texts and to problems of textual criticism. Translation of the Hebrew Bible as a philological task is a central subject in several essays. Theology does not define what the essays are but what some of them are about: religious ideologies are objects of enquiry. Bertil Albrektson gathers together a selection of his essays, some of which have become classics, which were written on separate occasions and published in different, sometimes rather remote, places. They cover more than four decades of research, and for the first time they are now brought together in this accessible volume. Bertil Albrektson is a Swedish Old Testament scholar of international repute, awarded the Burkitt Medal for Biblical Studies by The British Academy in 2003. His writing was characterized by the late Professor P.R. Ackroyd of King's College, London, as 'a model of learning, clarity and dry humour'. This volume offers a unique resource to current scholars of biblical studies. This is a new translation into contemporary English of one of the greatest poems of the English Middle Ages. *Piers Plowman* remains of enduring interest for its vivid picture of the whole life of medieval society, for its deeply imaginative religious vision, and for its passionate concern to see justice and truth prevail in our world. A. V. C. Schmidt's translation of the B-text is provided with an Introduction and extensive Notes which place the work in its contemporary setting and offer a full interpretative commentary on the poem. ABOUT THE SERIES: For over 100 years Oxford World's Classics has made available the widest range of literature from around the globe. Each affordable volume reflects Oxford's commitment to scholarship, providing the most accurate text plus a wealth of other valuable features, including expert introductions by leading authorities, helpful notes to clarify the text, up-to-date bibliographies for further study, and much more. This book is a comprehensive introduction to text forming resources in English, along with practical procedures for analysing English texts and relating them to their contexts of use. It has been designed to complement functional grammars of English, building on the generation of discourse analysis inspired by Halliday and Hasan's *Cohesion in English*. The analyses presented

were developed within three main theoretical and applied contexts: (i) educational linguistics (especially genre-based literacy programmes) (ii) critical linguistics (as manifested in the development of social semiotics) and (iii) computational linguistics (in dialogue with the various text generation projects based on systemic approaches to grammar and discourse). English Text's major contribution is to outline one way in which a rich semantically oriented functional grammar can be systematically related to a theory of discourse semantics, including deconstruction of contextual issues (i.e. register, genre and ideology). The chapters have been organized with the needs of undergraduate students in theoretical linguistics and postgraduate students in applied linguistics in mind.

Abstract: Techniques for designing and developing text materials are described and elaborated for text development technologists. This book focuses on 2 broad categories of techniques for structuring textual materials, termed "implicit" (e.g.: discourse analysis, elaboration theory) and "explicit" (e.g.: algorithms, tables, diagrams) techniques. Implicit techniques are concerned with the structure of the content and sequencing of the message; explicit techniques display the structure of the message. The 4 sections of the book address; implicit communication techniques; explicit textual design; specific design problems; and how individuals differentially interact with text materials, ranging from printed matter to television projections. The Building Cognitive Applications with IBM Watson Services series is a seven-volume collection that introduces IBM® Watson™ cognitive computing services. The series includes an overview of specific IBM Watson® services with their associated architectures and simple code examples. Each volume describes how you can use and implement these services in your applications through practical use cases. The series includes the following volumes: Volume 1 Getting Started, SG24-8387 Volume 2 Conversation, SG24-8394 Volume 3 Visual Recognition, SG24-8393 Volume 4 Natural Language Classifier, SG24-8391 Volume 5 Language Translator, SG24-8392 Volume 6 Speech to Text and Text to Speech, SG24-8388 Volume 7 Natural Language Understanding, SG24-8398

Whether you are a beginner or an experienced developer, this collection provides the information you need to start your research on Watson services. If your goal is to become more familiar with Watson in relation to your current environment, or if you are evaluating cognitive computing, this collection can serve as a powerful learning tool. This IBM Redbooks® publication, Volume 6, introduces the Watson Text to Speech (converts written text into natural sounding audio in various languages and voices) and Watson Speech to Text (converts audio voice into written text) services. This book introduces concepts that you need to understand to use these Watson services and provides simple code examples to illustrate the use of the APIs. This book includes examples of applications that demonstrate how to use the Watson Text to Speech and Speech to Text services in practical use cases. You can develop and deploy the sample applications by following along in a step-by-step approach and using provided code snippets. Alternatively, you can download an existing Git project to more quickly deploy the application. The official book on the Rust programming language, written by the Rust development team at the Mozilla Foundation, fully updated for Rust 2018. The Rust Programming Language is the official book on Rust: an open source systems programming language that helps you write faster, more reliable

software. Rust offers control over low-level details (such as memory usage) in combination with high-level ergonomics, eliminating the hassle traditionally associated with low-level languages. The authors of The Rust Programming Language, members of the Rust Core Team, share their knowledge and experience to show you how to take full advantage of Rust's features--from installation to creating robust and scalable programs. You'll begin with basics like creating functions, choosing data types, and binding variables and then move on to more advanced concepts, such as: Ownership and borrowing, lifetimes, and traits Using Rust's memory safety guarantees to build fast, safe programs Testing, error handling, and effective refactoring Generics, smart pointers, multithreading, trait objects, and advanced pattern matching Using Cargo, Rust's built-in package manager, to build, test, and document your code and manage dependencies How best to use Rust's advanced compiler with compiler-led programming techniques You'll find plenty of code examples throughout the book, as well as three chapters dedicated to building complete projects to test your learning: a number guessing game, a Rust implementation of a command line tool, and a multithreaded server. New to this edition: An extended section on Rust macros, an expanded chapter on modules, and appendixes on Rust development tools and editions. A close study of the relationship between text and film versions of Great Expectations. Literature and film studies students will find plenty of material to support their courses and essay writing on how the film versions provide different readings of the original text. Focussing on David Lean's film of Great Expectations, the book discusses: the literary text in its historical context, key themes and dominant readings of the text, how the text is adapted for screen and how adaptations have changed our reading of the original text. There are numerous excerpts from the literary text, screenplays and shooting scripts, with suggestions for comparison. The book also features quotations from authors, screenwriters, directors, critics and others linked with the chosen film and text. The application of causal inference methods is growing exponentially in fields that deal with observational data. Written by pioneers in the field, this practical book presents an authoritative yet accessible overview of the methods and applications of causal inference. With a wide range of detailed, worked examples using real epidemiologic data as well as software for replicating the analyses, the text provides a thorough introduction to the basics of the theory for non-time-varying treatments and the generalization to complex longitudinal data. Computer games are one of the most exciting and rapidly evolving media of our time. Revenues from console and computer games have now overtaken those from Hollywood movies; and online gaming is one of the fastest-growing areas of the internet. Games are no longer just kids' stuff: the majority of players are now adults, and the market is constantly broadening. The visual style of games has become increasingly sophisticated, and the complexities of game-play are ever more challenging. Meanwhile, the iconography and generic forms of games are increasingly influencing a whole range of other media, from films and television to books and toys. This book provides a systematic, comprehensive introduction to the analysis of computer and video games. It introduces key concepts and approaches drawn from literary, film and media theory in an accessible and concrete manner; and it tests their use and relevance by applying them to a small but

representative selection of role-playing and action-adventure games. It combines methods of textual analysis and audience research, showing how the combination of such methods can give a more complete picture of these playable texts and the fan cultures they generate. Clearly written and engaging, it will be a key text for students in the field and for all those with an interest in taking games seriously. Books do not just contain texts: books themselves are cultural artefacts, which convey many meanings in their own right, meanings which interact with the texts they contain. Awareness of the many significances of books as cultural and textual objects reshapes the traditional disciplines of textual theory, analytic bibliography, codicology and palaeography, while the advent of electronic books, and digital methods for representing print books, is introducing a new dimension to our understanding. Seven essays in this volume, ranging over medieval Portuguese and Swedish manuscripts, eighteenth-century Icelandic editions, Australian playtexts, Thackeray and Anita Brookner, and Stefan George, consider these questions from the broad perspective of textual scholarship. Texts may exist on the borderland of word and not-word; or they may spring from borderlands of nation or culture; or they may be considered from the margins of neighbouring disciplines. So readers must set the texts within contexts, to see the play of text against border. Essays in this volume explore different texts against varying backgrounds – Pound's *Cantos*, Joyce's *Ulysses*, Trollope's *An Eye for an Eye*, Woolf's *The Waves* – while essays by McGann and Lernout argue the dimensionality of text on the intersection of print and digital media. Implicit in all these essays is the contention, that textual scholarship must influence literary interpretation. Two final essays focus directly on this, in the cases of Melville's *Moby-Dick* and Emily Dickinson's late fragments. An extensive reviews section completes this volume. By focusing on the "East European" dialogues and polemics, both contemporary and past, the present volume pursues two aims: 1) It would like to locate the discussion between semiotics and dialectics in an historical context. 2) It would like to make the reader familiar with the solutions proposed by theoreticians like Bakhtin, Lotman, Voloshinov, Fischer and Mukařovsk, solutions which, in the past, were frequently ignored by European Marxists, semioticians and sociologists of literature. At present, one cannot help feeling that if they had been familiar with the works of these authors, Marxism, Critical Theory, semiotics and the sociology of literature (of the text) would have evolved differently. The papers in *Tibetan Literary Genres, Texts, and Text Types* investigate specific Tibetan genres and texts as well as genre classification, transformation, and reception. The text types examined range from oral trickster narratives to songs, offering-rituals, biographies, and modern literature. Traditional critical editing, defined by the paper and print limitations of the book, is now considered by many to be inadequate for the expression and interpretation of complex works of literature. At the same time, digital developments are permitting us to extend the range of text objects we can reproduce and investigate critically – not just books, but newspapers, draft manuscripts and inscriptions on stone. Some exponents of the benefits of new information technologies argue that in future all editions should be produced in digital or online form. By contrast, others point to the fact that print, after more than five hundred years of development, continues to set the agenda for how we think about

text, even in its non-print forms. This important book brings together leading textual critics, scholarly editors, technical specialists and publishers to discuss whether and how existing paradigms for developing and using critical editions are changing to reflect the increased commitment to and assumed significance of digital tools and methodologies. Comprehensive, authoritative, and cutting-edge, THE LEGAL ENVIRONMENT OF BUSINESS combines a classic black letter law approach with an interesting and accessible reader-friendly format. The cases, content, and features of the exciting new ninth edition have been thoroughly updated to represent the latest developments in the business law environment. An excellent assortment of cases ranges from precedent-setting landmarks to important recent decisions, and ethical, global, and corporate themes are integrated throughout. In addition, numerous features and exercises help you master the material and apply what you have learned to real-world issues, and the text offers an unmatched range of support resources, including innovative online study tools that help you work effectively and maximize your results. It's no wonder THE LEGAL ENVIRONMENT OF BUSINESS is used by more colleges and universities than any other legal environment text. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Argues that contemporary critics force works of literature to fit their theories and examines the impact of Marxism, linguistics, psychoanalysis, and structuralism on literary criticism This study cuts across book arts and literary stylistics in a revisionary theory of language as medium in textual action. Researchers in many disciplines have been concerned with modeling textual data in order to account for texts as the primary information unit of written communication. The book "Modelling, Learning and Processing of Text-Technological Data Structures" deals with this challenging information unit. It focuses on theoretical foundations of representing natural language texts as well as on concrete operations of automatic text processing. Following this integrated approach, the present volume includes contributions to a wide range of topics in the context of processing of textual data. This relates to the learning of ontologies from natural language texts, the annotation and automatic parsing of texts as well as the detection and tracking of topics in texts and hypertexts. In this way, the book brings together a wide range of approaches to procedural aspects of text technology as an emerging scientific discipline. The manuscripts that form the Greek New Testament are scattered throughout the world and are usually only accessible to scholars and professionals. These were the manuscripts read by the earliest Christians, which comprised their "New Testament." In his volumes, Philip Wesley Comfort bridges the gap between these extant copies and today's critical text by providing accurate transcriptions of the earliest New Testament manuscripts, with photographs on the facing pages so readers can see the works for themselves. Comfort also provides an introduction to each manuscript that summarizes the content, date, current location, provenance, and other essential information, including the latest findings. This allows students and scholars to make well-informed decisions about the translation and interpretation of the New Testament. Volume 1 includes manuscripts from Papyrus 1-72. Volume 2 includes manuscripts from Papyrus 75-139 as well as from the uncials. In addition, it features a special section on determining

the date of a manuscript. This two-volume set replaces the previously published single volume Text of the Earliest New Testament Greek Manuscripts, as it contains many new manuscripts, updated research, and higher quality images of all manuscripts previously covered. "For nearly a generation, Philip Comfort's The Text of the Earliest New Testament Greek Manuscripts (Tyndale House, 2001) has been an almost indispensable tool for the many students and scholars who know biblical Greek but whose only acquaintance with the earliest Greek manuscripts is through the textual apparatus of the Nestle or UBS text. This work provides introductions to all the early papyri, plus the actual texts in readable printed Greek. Who could ask for more? Only the passage of time requires more, and Philip Comfort has now supplied it, with a very welcome update of forty-nine more papyri (published since 2001), as well as papyri and uncials of the fourth century. This is a major achievement giving more and more of us a place at the table."-- J. Ramsey Michaels, Missouri State University "As a scholar and teacher-preacher, I need to know the evidence for the dating of a particular book and the evidence for the best reading of the text. The compiled Greek New Testaments are handy, but they do not give me enough information. In these present volumes, I get what I want and need for the roughly 190 of the earliest manuscripts rather than relying on cryptic footnotes or chasing around the world to find the actual manuscripts themselves. These volumes include photographs of the manuscripts, discussion of their dating, and transcriptions of their texts. Thank you Philip Comfort and the publisher. I hope the binding is sturdy, for the books will be used." Peter H. Davids, -- Houston Graduate School of Theology "The first edition of this book filled a very important need in bringing the earliest New Testament manuscripts in a single space. This second edition only enhances the work's usefulness as it includes more than one hundred new manuscripts. The discussion of the dating of the manuscripts will be of considerable value. All those interested in New Testament textual criticism will find this as an essential tool." -- John N. Oswalt, Asbury Theological Seminary "A life's work, now available for the New Testament exegete. This great work presents clear access to the earliest New Testament Greek manuscripts. A magnum opus by Philip Comfort, these useful volumes of the papyri and uncials, provide beyond what students see in the critical apparatus of the Nestle and UBS texts. This is a must-have resource for New Testament exegesis, giving immediate access to the text of each manuscript dated from AD 100 to AD 400. It is a book every New Testament scholar will grow into, as their skills in New Testament exegesis progress. This is a great bargain." -- Jim Swanson, Tyndale House Publishers "The earliest manuscripts are a topic of reflection and debate when it comes to the New Testament text. This book gives you the latest, up close look at the first four centuries of manuscripts. This a useful study that reveals the state of the discussion about these important manuscripts."-- Darrell L. Bock, Dallas Theological Seminary "This book is an indispensable resource for all students of the New Testament, especially those engaged in New Testament textual criticism. All the features that made the first edition an invaluable reference for the study of the Greek New Testament remain in place. The expanded edition of the volume includes the additional papyri and another fifty manuscripts dated from the fourth century AD. Kudos to the author and publisher for collecting all these New Testament Greek

manuscripts in a most readable and accessible two-volume format. My high commendation for this edition of the book is only reinforced by the success of its predecessor." -- Andrew Hill, Wheaton College Based on the author's doctoral dissertation. This volume investigates the text of Paul's Epistle to the Galatians and its history, how it changed over time. This work performs a stemmatic analysis of 92 witnesses to the text of Galatians, using cladistic methods developed by computational biologists, to construct an unoriented stemma of the textual tradition. The stemma is then oriented based on the internal evidence of textual variants.
