May 7, 2018 Retool your whole school for EL achievement For any student, middle and high school can be challenging. But for an English learner or striving reader—and the myriad words, phrases, syntax, texts, and concepts they must negotiate on a daily basis—the stakes seem a whole lot higher. Fortunately for content-area teachers, Margarita Calderón and Shawn Slakk make available in a single resource all the best instructional and professional development combinations for expediting comprehension across the secondary grades. Really a tool to assist all learners across all language needs, the second edition of Teaching Reading to English Learners, Grades 6-12, provides evidence-based strategies for helping content-area teachers and schools at large: Teach academic language in all subject areas Embed discourse practice through interaction strategies Integrate basic and close reading comprehension skills into lessons Teach drafting, revising, and editing for content-specific writing Use cooperative learning to develop social emotional skills and enhance academic achievement Calderón and Slakk know firsthand that if we're to counter the commonly held narrative of predictable failure among our ELs, it takes a whole school, and they have the evidence to prove it. Read Teaching Reading to English Learners, Grades 6-12, implement its strategies across all classrooms, and soon enough you, too, will maximize the comprehensions skills so critical to our ELs' long-term success. Funded by the National Science Foundation and successfully field-tested in a variety of settings, the materials presented give teachers the opportunity to grow as learners for the classes they teach. Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the sixth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.
