Ocean Wave Climate Jun 06

2021 Waves critically affect man in coastal regions, including the open coasts and adjacent continental shelves.

Preventing beach erosion, designing and building structures, designing and operating ships, providing marine forecasts, and coastal planning are but a few examples of projects for which extensive information about wave conditions is critical. Scientific studies, especially those involving coastal processes and the development of better wave prediction models, also require wave condition information. However, wave conditions along and off the coasts of the United States have not been adequately determined. The main categories of

available wave data are visual estimates of wave conditions made from ships at sea, scientific measurements of waves made for short time periods at specific locations, and a small number of long-term measurements made from piers or offshore platforms. With these considerations in mind, the National Ocean Survey of the National Oceanic and Atmospheric Administration sponsored the Ocean Wave Climate Symposium at Herndon, Virginia, July 12-14, 1977. This volume contains papers presented at this symposium. A goal of the symposium was to establish the foundations for a

comprehensive and far-sighted wave measurement and analysis program to fully describe the coastal wave climate of the United States. Emphasis was placed on ocean engineering and scientific uses of wave data, existing wave monitoring programs, and modern measurement techniques which may provide currently needed data.

"A highly useful source for business reference collections". -- American Reference Books Annual New Edition Now it's easier than ever to locate crucial economic

and statistical data on this prominent sector of American business. The new 3rd edition holds the key to grasping what's happening in 36 industries including depository and nondepository institutions, mortgage bankers and brokers, foreign trade and international banks, securities and commodity brokers and services, insurance agents and brokers, real estate firms and many other related industries. Profiles include statistics, ratios, state and regional data and more.
