The short story "The Law of Life" by Jack London is a study on the human psyche, as one faces the familiar cycle of life and death. Old Koskoosh, who is the father of his Native American tribe's chief, is dying. As his people leave him and he lays on the ground in his final hours to wait for his end, he looks back on his life. Memorable events fill his thoughts until the very end - even until the wolves arrive. The short story is one of London's stories inspired by the period the writer spent at the Klondike Gold Rush in the late 19th century and was published in the early 20th century. Jack London (1876-1916) was an American writer and social activist. He grew up in the working class, but became a worldwide celebrity and one of the highest paid authors of his time. He wrote several novels, which are considered classics today, among these 'Call of the Wild', 'Sea Wolf' and 'White Fang'. Since its independence in January 1948, Myanmar has tried to find a way to deal with (at one time) ideologically hostile and traditionally chauvinistic China which has pursued a foreign policy aimed at restoring its perceived influence in Myanmar. To counter China's attempts to influence Myanmar's foreign policy options has always been a challenge for the Myanmar government. Since the 1950s, successive Myanmar governments have realized that Myanmar's bilateral relations with the People's Republic of China should best be conducted in the context of promoting the Five Principles of Peaceful Coexistence, the Bandung spirit and the Pauk-Phaw (kinsfolk) friendship. The term Pauk-Phaw is exclusively devoted to denote the special nature of the Sino-Myanmar relationship. This work argues that Myanmar's relationship with China is asymmetric but Myanmar skilfully plays the "China Card" and it enjoys considerable space in its conduct of foreign relations. So long as both sides fulfill the obligations that come under "Pauk-Phaw" friendship, the relationship will remain smooth. Myanmar has constantly repositioned her relations with China to her best advantage. Myanmar's China policy has always been placed somewhere in between balancing and bandwagoning, and the juxtaposition of accommodating China's regional strategic interests and resisting Chinese influence and interference in Myanmar's internal affairs has been a hallmark of Myanmar's China policy. This is likely to remain unchanged. The importance of haploids is well known to geneticists and plant breeders. The discovery of anther-derived haploid *Datura* plants in 1964 initiated great excitement in the plant breeding and genetics communities as it offered shortcuts in producing highly desirable homozygous plants. Unfortunately, the expected revolution was slow to materialise due to problems in extending methods to other species, including genotypic dependence, recalcitrance, slow development of tissue culture technologies and a lack of knowledge of the underlying processes. Recent years have witnessed great strides in the research and application of haploids in higher plants. After a lull in activities, drivers for the resurgence have been: (1) development of effective tissue culture protocols, (2) identification of genes controlling embryogenesis, and (3) large scale and wide spread commercial up-take in plant breeding and plant biotechnology arenas. The first major international symposium on "Haploids in Higher Plants" took place in Guelph, Canada in 1974. At that time there was much excitement about the potential benefits, but in his opening address Sir Ralph Riley offered the following words of caution: "I believe that it is quite likely that haploid research will contribute cultivars to agriculture in several crops in the future. However, the more extreme claims of the enthusiasts for haploid breeding must be treated with proper caution. Plant breeding is subject from time to time to sweeping claims from enthusiastic proponents of new procedures.
