An International Index of Films on the Conservation and Utilization of Resources, Prepared for the United Nations Scientific Conference on the Conservation an Sep 29 2020

Plant Resource Utilization and Conservation Aug 09 2021 A growing worldwide realization that biodiversity is fundamental to agricultural production and food security, as well as a valuable constituent of environmental conservation have been clearly observed. The importance of biodiversity and its conservation can not be overemphasized. The present text book 'Plant Resource Utilization and Conservation' covers the syllabi of M.Sc. Botany final year students of most of the Indian Universities and particularly the syllabus recently recommended by the University Grants Commission. Book covers chapters on Biodiversity; Sustainable development; Origin of agriculture and Worlds centres of primary diversity of domesticated plants. Economic importance of food; Forage and fodder crops; Medicinal plants; Aromatic and essential oils; vegetable oils and fats; Plant fibres; Timber yielding plants; Tannin and dyes yielding plants; Gums and resins; Pulp and paper etc. have been given in detail. Chapters on Green revolution; Avenue trees and Plants in pollution control have been dealt with clarity and recent information. Book also includes chapters on Principles of conservation; Strategies for in-situ and ex-situ conservation and General account of national

agencies (ICAR, CSIR, BSI, NBPGR & DBT). This book will definitely serve as an excellent reading and reference material for students of Botany, researchers environmentalists, Agriculture scientists and forest personnels. We hope that students preparing for competitive examinations may also find the book useful.

Conservation and Sustainable Utilization of Bioresources Oct 19 2019

This book brings together chapters related to sustainable utilization of biological resources, including in situ and ex situ conservation of rare, endangered, and threatened plants. The title also gives a special emphasis on marine sponges and mangrove ecosystems, which are two important untapped potential resources of the marine ecosystem and play a key role in maintaining the marine ecosystem. There is an urgent need for the conservation, exploration and utilization of bioresources for the growth and survival of human beings. Due to the significant reduction in biological resources, many countries are developing strategic action plans for the conservation and sustainable use of biological resources. That is where this book fills the gap by discussing the significant development of new products and methodologies for sustainable utilization of these resources. This book also unveils a world of novel bioactive molecules from medicinal plants and the marine ecosystem and explains how drug design pipelines can advance modern drug development. The target audiences for this book include biodiversity researchers who are working on technology and bioresource management issues and faculty and students in the environment research areas and Biodiversity conservation.

Resource Conservation and Utilization Project: Annex C-F Dec 13 2021

Agricultural Biotechnology, Biodiversity and Bioresources Conservation and Utilization May 26 2020 This book covers a range of important topics on crop and animal genetics, breeding and genomics, as well as biodiversity and genetic resources conservation and utilization reflecting three thematic sections of working groups of the Biotechnology Society of Nigeria. The topics range from agricultural biotechnology, including genetically modified organisms and gene-editing for agronomically important traits in tropical crops, to Nigeria's mega biodiversity and genetic resources conservation. This book will engender a deeper understanding of underpinning mechanisms, technologies, processes and science-policy nexus that has placed Nigeria as a leader in biotechnology in Africa. The book will be useful reference material for scientists and researchers working in the fields of food and agricultural biotechnology,

bioinformatics, plant and animal genetics, breeding and genomics, genetic resources conservation and enhancement. Emphasizes recent advances in biotechnologies that could ameliorate the high-level global food and nutrition insecurity through plant and animal genetics, breeding, as well as genomics Provides detailed information towards harnessing indigenous bioresources for food and nutrition security and climate change adaptation Introduces new frontiers in the area of genomics, most especially their relevant applications in crop and animal breeding Reviews biotechniques that could enhance plant genetic resources conservation and utilization Discusses current biotechnological approaches to exploit genetic resources including the development of synthetic hexaploid wheat (SHW) for crop adaptation to the increasingly changing global climate Olawole O. Obembe, Ph.D., is a Professor of Plant Biotechnology and UNESCO Chair, Plant Biotechnology, Covenant University Ota, Nigeria. Emmanuel Olufemi Ekundayo, Ph.D., is Associate Professor of Medical Microbiology and Microbial Genetics, Michael Okpara University of Agriculture, Umudike, Nigeria. Arinze Stanley Okoli, Ph.D., is Associate Professor at Genoek - Centre for Biosafety, Universitetet II, Breivika, Tromsø, Norway. Abubakar Gidado, Ph.D., is Professor of Biochemistry and Director North-East Zonal Biotechnology Centre of Excellence at the University of Maiduguri, Nigeria. Charles Oluwaseun Adetunji, Ph.D., is Associate Professor of Microbiology and Biotechnology and Director of Intellectual Property and Technology Transfer, Edo State University, Uzairue, Nigeria. Abdulrazak B. Ibrahim, Ph.D., is a Capacity Development Expert at the Forum for Agricultural Research in Africa (FARA) and Associate Professor of Biochemistry, Ahmadu Bello University, Zaria, Nigeria. Benjamin Ewa Ubi, Ph.D., is a Professor of Plant Breeding and Biotechnology and Director, Biotechnology Research and Development Centre, Ebonyi State University Abakaliki, Nigeria.

Biodiversity Conservation and Utilization in a Diverse World Nov 24 2022

This book "Biodiversity Conservation and Utilization in a Diverse World" sees biodiversity as management and utilization of resources in satisfying human needs in multi-sectional areas including agriculture, forestry, fisheries, wildlife and other exhaustible and inexhaustible resources. Its value is to fulfill actual human preferences and variability of life is measured by amount of genetic variation available. In viewing diversity as an ultimate moral value, one is faced with a situation in environmental preservation in order to allow components of total diversity to flourish and constitute a threat to continuous existence and decrease total diversity. The overall importance described economic benefits from biodiversity, though difficult to measure and varying, but are limited on a local scale, increase on a regional or national scale and become potentially substantial on a transnational or global scale.
