An introductory science course Vividly written and based on up-to-date scholarship, this title provides an interpretive overview of the international history of the Cold War. Whether entering higher education straight from school, or returning to study later in life, students need to develop effective study skills to get the most out of a course. Whatever the subject, this book will help to achieve the aims of the student by offering practical advice and useful techniques for successful study. These skills are not always taught as part of courses because of time restriction, but with an increased performance emphasis for lecturers they are vital to the success of the course. In addition to this with more and more people returning to education and undergoing Continuing Professional Development the audience for this book is growing rapidly. The book covers three main areas: * accepting responsibility for learning: personal well-being, avoiding stress and organising time * student centred learning: developing the ability to learn and communicate through thinking, listening, observing, writing and talking * revision and examination techniques: approaching examinations with confidence. With

additional help of choosing the right course and a new section on computer skills, Study! will be a valuable addition to the bookshelf of any student. > "One of Zelazny's most delightful books: Jack the Ripper's dog Snuff narrates a mad game of teams to cause or prevent armageddon." NEIL GAIMAN All is not what it seems. In the murky London gloom, a knife-wielding gentleman named Jack prowls the midnight streets with his faithful watchdog Snuff - gathering together the grisly ingredients they will need for an upcoming ancient and unearthly rite. For soon after the death of the moon, black magic will summon the Elder Gods back into the world. And all manner of Players, both human and undead, are preparing to participate. Some have come to open the gates. Some have come to slam them shut. And now the dread night approaches - so let the Game begin. Praise for A Night in the Lonesome October: ". . . this book is unique; the premise, Zelazny's writing and the atmosphere conjured up are something very special indeed." "A geek fest extraordinaire with huge wit, warmth and intelligence." "An absolute gem - how can you not to like something written from the perspective of Jack the Ripper's super-intelligent dog?! An outstanding example of truly original fiction." "This is pure brilliance . . . Highly recommended." Editorial reviews: "The last great novel by one of the giants of the genre." George R.R. Martin "A madcap blend of horror tropes and fantasy. . . There aren't many authors who would set out to write a novel in which the Wolfman and Jack the Ripper were the two heroes . . . And I'm not sure anyone else could have made it work." Science Fiction Chronicle "Sparkling, witty, delightful. Zelazny's best for ages, perhaps his best ever." Kirkus Reviews "A cheerful, witty, well-crafted fantasy . . . Its deft, understated good humor and spare, poetic prose reaffirm Zelazny as one of fantasy's most skilled practitioners." Publishers Weekly The Great Cold War is arguably the most fascinating account yet written about the Cold War--and a timely enunciation of the lessons we need to learn from the Cold War years if we are to be successful in tackling the potential confrontations of the 21st century. This is a riveting expose of modern history for the general reader, a "must read" for policy-makers, and an eye-opening overview for scholars and students. No other book conveys so vividly how each side interpreted the other's intentions, and what shaped their actions. In a richly informed and perceptive "insider's account", former British diplomat Gordon Barrass shows that while there were

times when each side did understand the other's intentions, there were also times when they were wildly wrong--leading to the chilling revelation that the situation was far more serious than most people knew at the time--or imagine now. In looking back over that half-century of confrontation, Barrass poses three big questions: Why did the Cold War start? Why did it last so long? And why did it end the way it did? To answer them, he traveled to Washington, Paris, Brussels, Berlin, Warsaw, and Moscow to interview nearly 100 people, including top policymakers, strategists, military commanders, and key figures in the world of intelligence. Their narratives reveal what was going on behind the scenes, providing valuable insights into the mixture of insecurity, ignorance, and ambition that drove the rivalry between the two sides. Barrass concludes that bringing the Cold War to a peaceful end was a far greater challenge than just "being tough with the Soviets." In the end it depended on the Americans' "getting inside the mind" of the Soviets to gain the leverage needed to achieve their goal--and intelligence played a key role in that process. Effective communication is vital to science, engineering and business management. Stories by: Glynn Owen Barrass, Andrew Coulthard, Richard Alan Scott, Sarah Walker, J. Edwin Buja, David Agranoff, Anthony Trevino, Michael Housel, John Chadwick, David Voyles, Nora Peevey, B.E. Dantalion. Second volume by Eighth Tower Publications, in a series of anthologies revolving around genre writers and artists who set the parameters and frameworks of the kind of tales that we prefer to read (the first

volume was dedicated to HP Lovecraft). Here you will find another varied selection of interpretations inspired by the Gates of Hell film trilogy by the Italian legendary director Lucio Fulci. Many authors do elaborate on themes explicated in the movies, but there are an equal number that only take the barest of essentials from Fulci's works and go off tangentially instead. You will find two tales in which the film features, both in very different ways: Sarah Walker's 'The Evocation of Ansell Jeffers' and Andrew Coulthard's 'The Seventh Gate'. Some stories such as Michael Housel's 'Summer Urges' hint at the threat of the living dead (simultaneously using characters and tropes from the film *City of the Living Dead*, but only in passing), while John Edwin Buja's wartime-set 'Lost in Hell on the Way to Victory' similarly uses the living dead motif and mentions the Gates of Hell but otherwise makes no reference to anything from the films. More proscribed tomes lie at the heart of both John Chadwick's 'The Book of Belman' (Chadwick's own creation *The Book of Belman*) and Charles Evans' 'The Black Hole (Robert Bloch's *De Vermis Mysteriis*). Of course, other stories feature hordes of our favourite brain-munchers running amok, like Glynn Owen Barrass' 'Terror at the Harriet Kingston Motel' and Nora B. Peevy's darkly comedic 'The Witch of Fox Point', which features a cast of memorable characters including a plucky teenager who, along with her witch grandmother and the ghost of a young girl, battle against a veritable swarm of the undead (and zombie cows) in order to save the world. In Richard Alan Scott's 'Son of No one', a real-life event that terrorised New York in the seventies is given an unsettling twist, setting the tale against a palpable sense of genuine fear and panic that really was felt by people at the time, told by a native of NYC in a way that creates a sense of reality that only serves to heighten the unfolding nightmare. David Voyles' 'Last Rites' has its own blackly humorous moments in a well-observed tale set in a typical English town. Music plays a central role in David Agranoff and Anthony Trevino's nightmarish 'Scoring The Season of the Unnamed',

So we invite you to barricade yourself into your house, black out the windows, set a fire in the grate, turn on a dim light by which to read, stockpile some weapons perhaps, and settle yourself into a comfortable chair and let these eleven tales of terror accompany you into the small hours of the night. Whether entering higher education straight from school, or returning to study later in life, students need to develop effective study skills to get the most out of a course.

The SUPERMEN "After a rare speech at the National Center for Atmospheric Research in Boulder, Colorado, in 1976, programmers in the audience had suddenly fallen silent when Cray offered to answer questions. He stood there for several minutes, waiting for their queries, but none came. When he left, the head of NCAR's computing division chided the programmers. 'Why didn't someone raise a hand?' After a tense moment, one programmer replied, 'How do you talk to God?'" -from The SUPERMEN The Story of Seymour Cray and the Technical Wizards behind the Supercomputer "They were building revolutionary, not evolutionary, machines. . . . They were blazing a trail-molding science into a product. . . . The freedom to create was extraordinary." -from The Supermen In 1951, a soft-spoken, skinny young man fresh from the University of Minnesota took a job in an old glider factory in St. Paul. Computer technology would never be the same, for the glider factory was the home of Engineering Research Associates and the recent college grad was Seymour R. Cray. During his extraordinary career, Cray would be alternately hailed as "the Albert Einstein," "the Thomas Edison," and "the Evel Knievel" of supercomputing. At various times, he was all three-a master craftsman, inventor, and visionary whose disdain for the rigors of corporate life became legendary, and whose achievements remain unsurpassed. The Supermen is award-winning writer Charles J. Murray's exhilarating account of how the brilliant-some would say eccentric-Cray and his gifted colleagues blazed the trail that led to

the Information Age. This is a thrilling, real-life scientific adventure, deftly capturing the daring, seat-of-the-pants spirit of the early days of computer development, as well as an audacious, modern-day David and Goliath battle, in which a group of maverick engineers beat out IBM to become the runaway industry leaders. Murray's briskly paced narrative begins during the final months of the Second World War, when men such as William Norris and Howard Engstrom began researching commercial applications for the code-breaking machines of wartime, and charts the rise of technological research in response to the Cold War. In those days computers were huge, cumbersome machines with names like Demon and Atlas. When Cray came on board, things quickly changed. Drawing on in-depth interviews—including the last interview Cray completed before his untimely and tragic death—Murray provides rare insight into Cray's often controversial approach to his work. Cray could spend exhausting hours in single-minded pursuit of a particular goal, and Murray takes us behind the scenes to witness late-night brainstorming sessions and miraculous eleventh-hour fixes. Cray's casual, often hostile attitude toward management, although alienating to some, was more than a passionate need for independence; he simply thought differently than others. Seymour Cray saw farther and faster, and trusted his vision with an unassailable confidence. Yet he inspired great loyalty as well, making it possible for his own start-up company, Cray Research, to bring the 54,000-employee conglomerate of Control Data to its knees. Ultimately, The Supermen is a story of genius, and how a unique set of circumstances—a small-team approach, corporate detachment, and a government-backed marketplace-enabled that genius to flourish. In an atmosphere of unparalleled freedom and creativity, Seymour Cray's vision and drive fueled a technological revolution from which America would emerge as the world's leader in supercomputing. This book, by a scientist, is not a textbook on English grammar: nor is it just one more book on how to write a technical report, or a thesis, or a paper for publication. It is about all the ways in which writing is important to scientists and engineers in helping them to remember to observe, to think, to plan, to organize and to communicate.

Sexual Selection and Reproductive Competition in Insects explores the biological mechanisms underlying intrasexual reproductive competition as a driving force in sexual selection in insects. The book contains papers presented at a symposium on reproductive behavior in insects, held at the 15th International Congress of Entomology in Washington, D.C., in 1976. Organized into 13 chapters, this volume begins with a historical background on sexual selection theory and some of the principal conceptual advances that have been made since Charles Darwin (1871) posited that a sexual character was a characteristic possessed by only one sex and not the other. It then introduces the reader to differences in patterns of sexual selection and how they affect the reproductive success of individuals, male-female mating relationships, and mate choice by females. The book also discusses the evolution of mating strategies in insects, touching on concepts such as parental investment, female choice, and sexual conflict. Later chapters focus on winglessness, fighting, and dimorphism in male fig wasps and other insects, along with agonistic behavior among males of *Achias australis*, the function of horns in beetles, and the evolution of alternative male reproductive strategies in field crickets. The book also looks into the courtship and mating behavior of insects, and then concludes with an analysis of insect life histories in order to elucidate the biological aspects of the male-female phenomenon. This book is an essential reading for biologists and chemists.

In this 1992 book, John Kennedy's point is that explicit anthropomorphism was well-nigh killed by fierce criticism from the radical Behaviourists, but that we have to recognize that today there is a new anthropomorphism which is much harder to avoid because it is unintended and largely unconscious. For that reason even those who if they were asked would firmly reject anthropomorphism nevertheless unwittingly slip into it from time to time. This book contains nineteen essays on behavioural concepts

which have seldom been identified as anthropomorphic but in fact bear that connotation and lead to mistakes. Some of these, such as search images in birds and the learning of grammatical language by apes, have been seen through as errors after a time. A greater number, such as efference copy, goal-directedness, cognition and suffering in animals, are still current though not yet regarded as erroneous. The final chapter outlines things we can do to minimise the damage it does to the causal analysis of animal behaviour. Good writing and communication skills are essential in many areas of science and engineering, to help observation, thinking and remembering, to organize work and to avoid stress. Written by a scientist for scientists, this book is much more than a textbook of English grammar - it is a valuable source of information for all aspects of writing in scientific and technical situations. The only book focusing on the ways in which writing is important to the scientific community, this book assists readers on: * how to write and choice of words * using numbers and illustrations * writing project reports, theses and papers for publication * giving a short talk or presentation. The new edition of Scientists Must Write has been fully revised and updated to take account of the changes in information and communications technology including word processing and information storage and retrieval; new appendices on punctuation, spelling and computers; and useful exercises to improve writing. This popular guide will be of great use to undergraduates, postgraduates, professional scientists and engineers. Many employers complain about the poor communication skills of many young people seeking employment; and many people in employment are handicapped by the poor quality of their written work. Characterizing academic writing as an integral part of the knowledge generation and dissemination process, it focuses on three main aspects: understanding research, documenting and sharing the process and results of research, and acknowledging the use of other people's ideas in the documentation. The authors use various samples of good as well as defective writing to illustrate the features of academic writing. They describe in detail the structure and contents of academic papers, especially conceptual and empirical research papers for journals. This lucidly written book will be a rich resource for MBA students and researchers working for MPhil and PhD degrees, especially in the fields of management, behavioural sciences and communications.
