Presents facts
alongside advice on
all aspects of being
a modern parent--
from pregnancy and
birth to baby and
childcare for the
first three years,
including a specific
chapter on having
another baby.
Includes data for
cotton, frozen
concentrated
orange juice,
potatoes, wool, and
imported frozen
fresh boneless beef.
This inspiring book
shows how Early
Years staff can
support the best
possible practice
for children under
three and their
families whilst
making use of the
limited funding

available.
Promoting the idea
of infants as
powerful learners,
the authors focus
on 0-3 years as the
vital first phase of
education and care,
which can require a
very specific
pedagogical
approach. They
discuss the
principles that
underpin the
practice of working
with the youngest
children, the
critical nature of
highly effective
pedagogical
practice and the
important role of
family workers in
building
relationships with
parents and the
extended family.
Working with
Children Aged 0-3
and Their Families
explores the
challenges and
responsibilities of

working with young children and communicates the 'Pen Green approach'. Pen Green has become a focal point for Early Years professionals due to its outstanding Early Years provision. The innovative approach chronicled in this book will encourage practitioners to research their own practice and use the outcomes to create a radical, unique and yet highly effective provision for infants, toddlers and their families. The book will be of interest to Early Years professionals, foundation and undergraduate students, and early

childhood educators. This edited volume constitutes the first serious, sustained examination of the study of children's books for children aged from 0 to 3 with contributions by scholars working in different domains and attempting to assess the recognition of the role and influence of children's literature on the cognitive, linguistic, psychological and aesthetic development of young children. This collection achieves a balance between theoretical, empirical, historical and cross-cultural approaches by examining the broad range of

children's books for children under three years of age, ranging from early-concept books through wimmelbooks and ABC books for small children to picture books that support the young child's acquisition of behavioral norms. Most importantly, the chapters proffer new insights into the strong relationship between children's books for young children and emergent literacy, drawing on current research in children's literature research, visual literacy, cognitive psychology, language acquisition, picture theory and pedagogy."
