Re-Locating the Sounds of the Western examines the use and function of musical tropes and gestures traditionally associated with the American Western in new and different contexts ranging from Elizabethan theater, contemporary drama, space opera and science fiction, Cold War era European filmmaking, and sampling in popular music. Each chapter focuses on a notable use of Western musical tropes, textures, instrumentation, form, and harmonic language, delving into the resonance of the music of the Western to cite bravura, machismo, colonisation, violence, gender roles and essentialism, exploration, and other concepts. Introduction to Criminology: Why Do They Do It? offers a contemporary and integrated discussion of key criminological theories to help students understand crime in the 21st century. Focusing on why offenders commit crimes, authors Pamela J. Schram and Stephen G. Tibbetts apply established theories to real-life examples to explain criminal behavior. Coverage of violent and property crimes is included throughout theory chapters so that students can clearly understand the application of theory to criminal behavior. The Third Edition includes new and expanded coverage of timely topics, such as victimization, measuring crime, multicide, gun control, and hate crimes. Three murders so far. No apparent motive; no link between the victims; none of them have been robbed. One item ties them together: a can of spray gas known as Chill has been left at the scene of each crime. Is someone killing for kicks? With no leads to pursue and no witnesses coming forward, all the cops can do is wait for murder number four. As rumors emerge, Archer realizes there's a pattern taking shape. Could there be more to these seemingly random killings than meets the eye? Teaming up with voodoo queen Solange Cordray, Archer begins to uncover evidence of a shocking conspiracy. "Bruns brings the chaotic frenzy of Mardi Gras to life."—Publishers Weekly "Thrill Kill explores gang turf wars, drug cartels and human trafficking as well as energy forces and the supernatural. "Dr. Phil," Canada's best-known automotive expert for more than 42 years, pulls no punches. Some obstacles we face in life are necessary for us to grow. Not only do these obstacles help us grow, but they are used to bring us closer to God and focus on a relationship with him. It Was Necessary to Break Your Heart to Save Your Life talks about some bad things that happened in Princess GanttaEUR(tm)s life that has helped her strengthen the one most important relationship in her life aEUR" the relationship with the Man who loves us unconditionally and who will never leave or forsake us. "Dr. Phil," along with George Iny and the Editors of the Automobile Protection Association, pull no punches. Special edition of the Federal register, containing a codification of documents of general applicability and future effect as of ... with ancillaries. Introductory Criminology: The Study of Risky Situations takes a unique and intuitive approach to teaching and learning criminology. Avoiding the fragmentation of ideas commonly found in criminology textbooks, Marcus Felson and Mary A. Eckert develop a more practical, readable structure that engages the reader and enhances their understanding of the material. Their descriptive categories, simultaneously broad and realistic, serve better than the usual philosophical categories, such as "positivism" and "classicism," to stimulate students' interest and critical thinking. Short chapters, each broken into 5–7 sections, describe situations in which crime is most likely to happen, and explain why they are risky and what society can and can't do about crime. They create a framework to organize ideas and facts, and then link these categories to the leading theories developed by criminologists over the last 100 years. With this narrative to guide them, students remember the material beyond the final exam. This fresh new text was created by two professors to address the main points they encounter in teaching their own criminology courses. Problems solved include: reluctant readers, aversion to abstract thinking, fear of theory, and boredom with laundry lists of disconnected ideas. Felson, a leader in criminology theory with a global reputation for innovative thinking, and Eckert, an experienced criminal justice researcher, are uniquely qualified to reframe criminology in a unified arc. By design, they offer abstractions that are useful and not overbearing; their prose is readable, and their concepts are easy to comprehend and remember. This new textbook challenges instructors to re-engage with theory and present the essence of criminological thought for adult learners, coaching students to grasp the concept before any label is attached and allowing them to emerge with deeper understanding of what each theory means and offers. Lean, with no filler or fluff like stock photos, Introductory Criminology includes the authors' graphics to crystallize and expand concepts from the text. FUNNY. FRIGHTENING. TRUE. It happens to all of us: You're minding your own business, when some idiot informs you that guns are evil, the Prius will save the planet, or the rich have to finally start paying their fair share of taxes. Just go away! you think to yourself -- but they only become more obnoxious. Your heart rate quickens. You start to sweat. You can't get away. Your only hope is... ...this book. Glenn Beck, author of the #1 New York Times bestsellers An Inconvenient Book and Glenn Beck's Common Sense, has stumbled upon the secret formula to winning arguments against people with big mouths but small minds: knowing the facts. And this book is full of them. The next time your Idiot Friends tell you how gun control prevents gun violence, you'll tell them all about England's handgun ban (see page 53). When they tell you that we should copy the UK's health-care system, you'll recount the horrifying facts you read on page 244. And the next time an idiot tells you that vegetable prices will skyrocket without illegal workers, you'll stop saying "no, they won't" and you'll start saying, "actually, eliminating all illegal labor will cause us to spend just \$8 a year more on produce." (See page 139.) Idiots can't be identified through voting records, they can be found only by looking for people who hide behind stereotypes, embrace partisanship, and believe that bumper sticker slogans are a substitute for common sense. If you know someone who fits the bill, then Arguing with Idiots will help you silence them once and for all with the ultimate weapon: the truth. Includes advertising matter. New topics addressed include alternative Intersections, alternative interchanges and individual/private transportation. Readers will also learn how to utilize a range of engineering concepts and methods to make future transportation systems safer, more cost-effective, and "greener". Providing a broad view of transportation engineering, including transport infrastructure, control methods and analysis techniques, this new edition is for postgraduates in transportation and professionals needing to keep up-to-date with the latest theories and models. Covers all forms of transportation engineering, including air, rail, road and public transit modes Examines different transportation modes and how to make them sustainable Features a new chapter covering the reliability, resilience, robustness and vulnerability of transportation systems In this book, the authors make extensive comparison between medical treatments and health optimization methods (an improved mind-body model) in order to determine their relative and TRUE benefits for cancer patients. For the health optimization method, they examine its use history, acceptance, and performance throughout its history; and for medicine, they examine medical treatment history, leading cancer theories, standard of care formation, formation of legal frameworks, and overwhelming performance data we could find from the massive medical literature. We can show with irrefutable evidence why medicine cannot cure cancer and what role it is actually playing. The book (1) discloses a systematic methodology for curing cancer in confidence; (2) extensively discusses how to do right things to win a speed contest in fighting cancer; (3) extensively discusses how to do right things to control cancer cell population, a critical strategy for survival; (4) provides detailed analysis of fatal common mistakes that have taken nine of ten cancer patient lives; (5) exposes flaws in the cancer treatment models, medical research model, the foundation of medicine; and (6) conduct a detailed analysis of four killer factors which are routinely found in nearly all cancer care. The approach used to similar to one used in Health Optimization Engineering, a new branch of health art. The book teaches the decisive roles of SPEED, NUMBER and MULTIPLE FACTORS and how to fight cancer by using a two-way optimization methodology. Those three terms and optimization method are not mentioned in medical books, cancer research articles, and are not part of the language used in hospitals. Our simulation and our kinetic studies show that both cancer development and reversal processes would take many years. The rates of reversals for cancer and all chronic diseases are so slow that medicine cannot accurately evaluate. This is why medicine cannot recognize or refuses to acknowledge any cure that requires half a year to several years to accomplish. The approach we use in this book is directly in conflict with three core concepts in medicine: dualism, reductionism, and population-based approach. Moreover, we found that medical treatments can partially neutralize and totally nullify the curative benefits of our optimization method. Based on our own findings and the results from reanalyzing massive existing medical publications, we inevitably found that medical treatments are primarily responsible for creating the cancer panic and the treatments shorten lives in a super majority of cases. We try to analyze every issue in the most comprehensive way. Our analysis covers medical model and its legal framework, leading cancer theories, treatment development histories, formation of standard of care, control selections in drug trials, the massive cancer controversies, and mountains of actual performance data. The most convincing evidence is the performance verdicts by recent medical studies and latest meta reviews. We try to built a watertight case that precludes any of those arguments that have been made by proponents of the reductionist medical model. Virtual and augmented reality raise significant questions for law and policy. When should virtual world activities or augmented reality images count as protected First Amendment 'speech', and when are they instead a nuisance or trespass? When does copying them infringe intellectual property laws? When should a person (or computer) face legal consequences for allegedly harmful virtual acts? The Research Handbook on the Law of Virtual and Augmented Reality addresses these questions and others, drawing upon free speech doctrine, criminal law, issues of data protection and privacy, legal rights for increasingly intelligent avatars, and issues of jurisdiction within virtual and augmented reality worlds.
